ACKNOWLEDGEMENTS

I would like to take this opportunity to express my deep gratitude to my Ph.D. thesis supervisor Prof. S.K. Sen. He has extended all the possible help to me during my stay at Bose Institute and later at IIT, Kharagpur. His excellent scientific resources and powerful drive encouraged me a lot. I thank him very much for his personal care extended to me throughout my Ph.D work.

I also thank Prof. Sumitra Sen, Calcutta University, my co-supervisor, for her support and encouragement. She also helped me in different ways from scientific discussions to routine University procedures.

I extend my sincere thanks to Dr. Pritilata Nayak for her help, critical suggestions and encouragement. She helped me particularly in plant transformation and documentation of my research results.

I am very much thankful to Dr. Debabrata Basu for his help and valuable suggestion during this work. Thanks are due to Dr. Sampa Das, Bose Institute for her constant encouragement and help during my stay at Bose Institute. I am very much thankful to Prof. Sudhamoy Ghosh and Prof. Dolly Ghosh for their critical suggestions during the work.

During my years of research, I have been fortunate to have senior colleagues like Dr. Asitava Basu and Dr. Mrinal Maity whose scientific interactions were helpful for my research work. The company provided by my colleague Maloy Ghosh was memorable. The discussions and arguments with him were helpful. Thanks to Ashis Kumar Mondal for his eagerness to help and discuss the day-to-day problems of routine research work. Thanks are due to many more, those who left the lab and those who joined later for providing a scientific and enjoyable lab atmosphere. To name a few are Drs. Ashis Bahattacharryya, Nasin Akthar, Monoranjan Chatterjee, Krishna and Sushma Mishra. I am thankful to Santhosh Ghosh for his help during thesis preparation. Abhijit, Pradeep, Jagannath, Azad, and all other lab members were always helpful to me in their own ways.
My brothers Radhakrishnan, Damodaran, Haridasan and Sreenivasan were really supportive and helpful during the tough time which I had passed calmly. Thanks to my "little mother" for whatever she had done for me.

Thanks for Shailaja for the help and support she has happily extended to me in every possible way.

Last, but not the least I wish to express my deep respect and gratitude to Prof. R. C. Sachar who initiated me in Scientific Research and also constantly supported me in different ways.

Om

Asatoma sat gamaya
Tamasoma jyotir gamaya
