FOREWORD

I remain sincerely indebted to my revered mentors, Dr. M. K. Poddar, Ph.D, D.Sc., C. Chem., F.R.S.C (Cond.), Professor, Department of Biochemistry, University of Calcutta, for his prosperous guidance and inspiring moral and physical support during the course of this study. His constant teaching, valuable suggestions and timely criticisms have not only served to successfully shape and design this work, but the lessons learnt through them have indeed made me a more confident, optimistic and principled individual than before.

My thanks are also due to Head of the Department of Biochemistry, University of Calcutta for providing me all possible infrastructural departmental facilities in carrying out this work. I also acknowledge with gratitude the help and guidance I have received from all faculty Members of the Department of Biochemistry.

My heartiest thanks are also due to all staff Members and scholars of the Department of Biochemistry for furnishing all possible help during the course of this study. My thanks are also due to Prof. C.K. Dasgupta, Department of Biophysics, Molecular Biology and Genetics, University of Calcutta, Prof. (Mrs.) M. Roy of IACS, Calcutta for providing EAC cell - inoculated mice and Prof. K. L. Mukherjee of Ramkrishna Seva Pratisthan, Department of Biochemistry for their help and guidance. Without their support, I could not achieve this goal.

I am very much thankful to Dr. S. Mukhopadhyay, Dr. B.C. Bandyopadhyay, Dr. S. K. Ghosh, Dr. M. Mondal, my senior colleagues as well as Dr. D. Banerjee, Mr. Sk. Jamaluddin, Mrs.
C. Bandyopadhyay, my present co-workers for their constant supportive involvement and assistance in every sphere.

It will be unjust, if I do not express reverence to my mother who was especially instrumental in motivating me to take up this doctoral work and was also an everlasting source of inspiration throughout the entire duration. I am extremely grateful to my father and friends for bearing by all the failures in commitment on my part, arising out of a very busy work schedule during this period. Their support has indeed been a great force behind the achievement of this goal.

Words are perhaps limiting to thank my husband Subhankar, who had almost single handedly managed everything over the last five years. Lastly, a sweet and dreamy kiss due to my three years old daughter Cagnajita. The gratefulness of a disqualified mother to her little Mamon. Surely, she was missing her mother during my working days. But I am unable to communicate my sorrows for that. This silent apology makes myself more attentive to my research work.

Sutapa Kali
