ACKNOWLEDGEMENT

I express my heartfelt gratitude and indebtedness to my mentor Dr. S.C. Roy, Reader in the Centre of Advanced Study, Department of Botany, University of Calcutta and it is for his directions that I succeeded in completing my Ph.D thesis.

I express my indebtedness to Prof. R. Purkayastha, Head, Department of Botany and Prof. S. Sen, Programme Coordinator, Centre of Advanced Study, Department of Botany, University of Calcutta for providing all kinds of facility for conducting research work in this department.

I offer my deep respect and gratefulness to the wellknown cytologist and chromosome technology connoisseur Prof. A.K. Sharma, in whose blessings and encouragement I have always basked. I also received immense inspiration and suggestions during the entire period of research from Prof. R.K. Choudhury of this department, for whom I have deep respect.

It is my pleasure to offer my thanks to my good friends and erstwhile colleagues Sri A.K. Malti of Bose Institute and Sri. A. Haldar, who encouraged and incited me by their enthusiasm.

I must acknowledge with deep appreciation the indispensable efforts and encouragement of my parents and wife, who barring their busy schedules, tolerated the occupational agonies that came along me.

This work was supported by the Council of Scientific and Industrial Research, New Delhi (Sanction # 9/27/(151)-87-EMR I).
