Contents

1. Introduction 1

2. Literature Review 4
   2.1 Introduction
   2.2 GnRH and similar bioactive peptides
      2.2.1 GnRH: structure and function studies
      2.2.2 Angiotensin II: peptide structure and function studies
      2.2.3 Kallidin: peptide structure and function studies
   2.3 G protein-coupled receptors as the bioactive peptide receptors
      2.3.1 GPCR: Sequence and Structure
      2.3.2 Ligand-binding domain of Class A GPCRs
      2.3.3 GnRH receptor and its ligand interactions
      2.3.4 Angiotensin II receptor and its ligand interactions
      2.3.5 Kallidin receptor and its ligand interactions
      2.3.6 The trigger of GPCR Activation
   2.4 Rationale for the present study

3. Methods: Molecular Modeling and Analysis 34
   3.1 Introduction
   3.2 Modeling strategy
   3.3 Generation of knowledge-base from structure-activity data
   3.4 Sequence Alignment
   3.5 Model building
      3.5.1 Loop search
   3.6 Energy Minimization
   3.7 Molecular dynamics (MD)
   3.8 Model refinement and analysis

4. The Native State of Bioactive Peptide Receptors 44
   4.1 The template structure for receptor modeling
   4.2 Gonadotropin releasing hormone receptor
   4.3 Angiotensin II type I receptor
   4.4 Bradykinin type I receptor
4.5 Comparison among the native states of the three receptors

5. The GnRH-GnRHR Complex

5.1 Introduction
5.2 GnRHR ligand-receptor interaction knowledge-base
5.3 Ligand docking on the native GnRHR
5.4 Alternate loop conformers for GnRHR EC-I
5.5 Modeling the GnRH-GnRHR complex
   5.5.1 MD analysis of the complex ‘model A’
   5.5.2 MD analysis of the complex ‘model B’
5.6 Comparison of the two complex models
5.7 Differences between the native and complex states of GnRHR

6. The Angiotensin II-AT1R Complex

6.1 Introduction
6.2 AT1R ligand-receptor interaction knowledge-base
6.3 Ligand docking on the native AT1R
6.4 Alternate loop conformers for AT1R EC-I
6.5 Modeling and MD analysis of the AngII-AT1R complex
6.6 Differences between native and complex states of AT1R

7. The Kallidin-B1R Complex

7.1 Introduction
7.2 B1R ligand-receptor interaction knowledge-base
7.3 The structure of the B1R ligand, kallidin
7.4 Ligand docking on the native state B1R
7.5 Alternate loop conformers for B1R EC-I
7.6 Modeling the kallidin-B1R complex
   7.6.1 MD analysis of the kallidin-B1R complex ‘model A’
   7.6.2 MD analysis of the kallidin-B1R complex ‘model B’
7.7 Comparison of the two complex models
7.8 Differences between native and complex states of B1R

8. Receptor Recognition of Bioactive Peptides: A Comparative Analysis

8.1 Introduction
8.2 The bioactive peptide receptors
8.2.1 Analysis of modeling strategy for the bioactive peptide receptors
8.2.2 Comparative analysis of the three receptor structures
8.3 The bioactive peptide-receptor complexes
  8.3.1 Bioactive peptides and their binding sites
  8.3.2 Difference between liganded and unliganded receptor structures
  8.3.3 Implications of ligand-induced conformational changes
8.4 Discussion

Bibliography
