4.5 Fabrication of pellets / bars

4.5.1 Sintering of the pressed pellets and bars

4.6 Characterisation of sintered material

4.6.1 Volume shrinkage
4.6.2 Apparent porosity & bulk density
4.6.3 Thermal expansion
4.6.4 True density
4.6.5 Flexural strength at ambient temperature
4.6.6 Flexural strength at elevated temperature
4.6.7 Thermal shock resistance
4.6.8 Microstructure analysis

5.0 RESULTS AND DISCUSSION

5.1 Synthesis of mixed hydroxide hydrogel

5.2 Physico-chemical characteristics

5.2.1 Particle size distribution
5.2.2 Chemical purity
5.2.3 Loose bulk density
5.2.4 Surface area
5.2.5 Infra red analysis of precursor powder
5.2.6 X ray analysis of precursor powder
5.2.7 Differential thermal analysis
5.2.8 Equilibrium dehydration
5.2.9 Infra red analysis of heat treated precursors
5.2.10 X ray analysis of heat treated precursors
5.2.11 Rehydration of the heat treated hydrogel
5.2.12 Kinetics of dehydration

5.3 Characteristics of sintered product

5.3.1 Volume shrinkage
5.3.2 Bulk density
5.3.3 Apparent porosity
5.3.4 Thermal expansion
5.3.5 True density
5.4 Mechanical Properties of the composites

5.4.1 Flexural strength at ambient temperature
5.4.2 Flexural strength at elevated temperature

5.5 Thermal shock resistance of the composite

5.6 Phase analysis

5.7 Microstructural analysis
