

Acknowledgements

It is a great opportunity for me to gratefully acknowledge the inspiration I received from my teachers at the school and college levels, and the seed of science they implanted in my mind that motivated me to stick to the arena of scientific research. I am specially indebted to Prof. J.J. Ghosh, Department of Biochemistry, Calcutta University, who was the prime mover in developing scientific mentality in me. I am also indebted to Profs. D. Sengupta and D.J. Chattopadhyay of the same Department who guided me in the right track during my study at the University level while my mind was confused under academic pressure.

I am deeply grateful to Prof. Dolly Ghosh who very sincerely and patiently guided my research in her laboratory to accomplish the research project described in this Dissertation. She is the teacher who first introduced me into the arena of scientific research in the domain of plant molecular biology. I am unable to express adequately my deep sense of gratitude to her not only for the able guidance I received at the prime stage of my research career, but also for her constant encouragement, fruitful advice, motherly attention and the creation of a tension free environment in our laboratory during the course of this work, which I am always going to cherish in my mind.

My words are insufficient to express my gratefulness to Prof. Sudhamoy Ghosh, Department of Biochemistry, who by his constructive criticism and endless enthusiasm created a fascination for enzymology and molecular biology in my mind. I am greatly benefited for his constructive criticism and scientific advice at every stage of this work. I also thank him sincerely for critically going through this Dissertation.

I am deeply indebted to Prof. S.K. Sen for his kind interest in my research. I gratefully remember his endeavour to speed up this work particularly at the latter stage and for extending me his laboratory facilities to carry out a number of critical experiments.

I must thank Dr. P.K. Ray, the Director, for making it easy for me to utilize all kinds of institutional facilities for this research project.

I am thankful to Prof. P. Bhattacharya and Prof. P. Sen, Department of Chemistry, who supported my research work, as Chair-persons of the Department, by extending all departmental facilities.

During the progress of this work, I received valuable suggestions and also experimental help from many faculty members of this Institute. I want to mention the following names who particularly took special interest in my work : Prof. Parul Chakraborty, Prof. N.K. Sinha, and Prof. Amitava Ghosh of the Department of Chemistry, Prof. Bharati Ghosh of the Department of Botany and Prof. R.K. Mandal and the late Dr. Prabhakar Gupta of the Department of Biochemistry.

I appreciated very much the support I got from my senior colleagues : Dr. Eli Mukhopadhyay, Dr. Ramaballav Roy, Dr. Krishnakali Neogi, Dr. Sharmila Chattopadhyay, Dr. Manas Pathak and Dr. Mallika Das of my laboratory; Dr. Niranjana Das, Dr. Sudip Chattopadhyay and Dr. Asim Mandal of the Department of Biochemistry. Without their active interest, helpful discussion, bright suggestions and exchanging of ideas, my research would have been very slow and boring.

I take this opportunity to express my sincere thanks to my current colleagues at BREF-BIOJEK, Indian Institute of Science, Kharagpur : Dr. Pritilata Nayak for preparation of the gel pictures and for her mental support in this endeavour; Dr. Asitava Basu and Dr. Debabrata Basu for their help in many ways in the preparation of the Dissertation and Dr. Mrinal K. Maiti, for initiating me into the domain of recombinant DNA technology creating an excitement in my mind that I will never forget.

I would like to extend my sincere thanks to my coworkers without whose ungrudging help this research would not have been possible. First, I would like to mention the name of Mr. Aniruddha Aich who helped me to learn the techniques of lipidology and with whom I spent some wonderful days in my laboratory that will always remain as fond memories. Next, I must mention the names of Mr. Asim Banerjee and Mr. Asraf Ali Molla of the Department of Biochemistry and Jaganmoy Guin of the P.D. laboratory, for their valuable technical help. Lastly, Mr. Subhas Pal of this laboratory, who helped me getting clean glass wares every day for my experiments, had been very considerate about my difficulties with day to day laboratory experiments.

I am indebted to Dr. Sankar Adhya (National Institute of Health, Baltimore, USA) for his help in N-terminal amino acid sequence determination.

I offer my sincere thank to Prof. S. Ghosh, Saha Institute of Nuclear Physics, Calcutta, for his help in laser densitometric scanning.

I also humbly acknowledge Prof. Dipak Bhattacharya, University of Calcutta, Dr. M. Singh, I.I.C.B., Calcutta and Dr. Dipak Dasgupta, S.I.H.P., Calcutta, for their active support and helpful discussions in this work.

I must thank Mr. Sabir Ahmed (Pithoragarh, Uttar Pradesh), Mr. L.P. Sharma (Kalinpong, West Bengal) and Dr. Rathin Chakraborty, Deputy Director, Botanical Survey of India, for their help in the collection of *Madhuca butyracea* seeds and other tissues, Mr. P.K. Maity, Calcutta University, for artistically drawing a few figures, Ms. Ruby Das for taking the final printout, Dhar Brothers for binding this Dissertation, the staff members of the Library and the Regional Scientific Instruments Centre, the Workshop and the Distributed Information Centre for helping me with their respective facilities.

I am thankful to Mr. Nasim Akhtar for his expert help in my computer work, Mr. Santosh Ghosh for drawing several computer generated figures and Ms. Gargi Mukherjee and Ms. Shamali Roychowdhury for checking the text. I also acknowledge all other scholars and members of BREF-BIOJEK, for their help and mental support to overcome all odd situations during the preparation of this Dissertation.

I acknowledge with thanks the Department of science and technology, Government of India and United Nations Development Program (U.N.D.P.) for financial support during the tenure of this work.

Lastly, I would like to express my ever lasting love and deep sense of gratitude to my parents and sincere thanks to other family members and close friends for their understanding and patience, and the sacrifice they made while I was working as a graduate student and unable to attend their needs.
