</table>
17. Part-word repetition in 30 subjects in three conditions and two tasks (reading and speech).

18. Word repetition in 30 subjects in three conditions and two tasks (reading and speech).

19. Filled pauses in 30 subjects in three conditions and two tasks (reading and speech).

20. Unfilled pauses in 30 subjects in three conditions and two tasks (reading and speech).

21. Prolongation in 30 subjects in three conditions and two tasks (reading and speech).

22. Percentage of subjects exhibiting each type of dysfluency in two age groups across conditions.

23. Mean and SD values of SPM in three conditions.

24. Mean and SD values of rate of reading of two age groups across conditions.

25. Change in rate of reading (SPM) in all the 30 subjects in across three conditions (D- decrease, I – increase, R- remained same).

26. Mean and SD values MNS (reading) task across three conditions.

27. Mean and SD values of MNS (reading) of two age groups across conditions.

28. Changes in MNS in reading task in 30 subjects across three conditions (I-increase, D-decrease, R-remaining same).

29. Mean and SD values of MNS scores (speech) across three conditions.

30. Mean and SD values of mean naturalness score (speech) of two age groups across conditions.

31. Changes in MNS of in speech task in all 30 subjects across conditions (I-increase, D-decrease, R- remains same).

32. Mean and SD values of VOT (ms) of unvoiced plosives in 3 conditions.
33. Mean and SD values of VOT (ms) of voiced plosives in 3 conditions.

34. Mean and SD values of VOT (ms) of unvoiced plosives in two age groups across three therapy conditions.

35. Mean and SD values of VOT (ms) of voiced plosives of two age groups across conditions.

36. Mean duration and SD values of vowels following unvoiced plosives (ms) in three conditions.

37. Mean duration and SD values of vowels following voiced plosives (ms) in three conditions.

38. Mean and SD values of vowel duration (ms) of two age groups across conditions.

39. Changes in vowel duration in 30 subjects across conditions (I-increase, D-decrease, R-remained same).

40. Mean and SD values of closure duration (ms) in unvoiced plosives in three conditions.

41. Mean and SD values of closure duration (ms) in voiced plosives in three conditions.

42. Mean and SD values of closure duration in two age groups across three therapy conditions.

43. Mean and SD values of total duration (ms) of unvoiced plosives in three conditions.

44. Mean and SD values of total duration (ms) of voiced plosives in three conditions.

45. Mean and SD values of total duration in two age groups across conditions.

46. Mean and SD values of $F_2$ transition duration (ms) in four conditions.

47. Mean and SD values of $F_2$ transition duration of two age groups across conditions.

48. Mean and SD values of burst duration (ms) in four conditions.

49. Mean and SD values of burst duration of two age groups across conditions.
50. Mean and SD values of voicing duration (ms) in four conditions. 174
51. Mean and SD values of voicing duration (ms) in two age groups across therapy conditions. 175
52. Mean and SD values of syllable repetition duration (ms) in three conditions. 177
53. Mean and SD of prolongation duration (ms) in two conditions. 179
54. Mean and SD values of extent of $F_2$ transition (Hz) four conditions. 181
55. Mean and SD values of extent of $F_2$ transition (Hz) of two age groups across conditions. 182
56. Mean and SD values of speed of $F_2$ transition (Hz/ms) in four conditions. 184
57. Mean and SD values of speed of $F_2$ transition in two age groups in three therapy conditions. 185
58. Mean and SD values of $F_2$ terminal frequency (Hz) in four conditions. 188
59. Mean and SD values of $F_2$ terminal frequency of two age groups across therapy conditions. 189
60. Mean and SD values of $F_1$ (Hz) of vowels in four conditions. 191
61. Mean and SD values of $F_1$ in two age groups across conditions. 192
62. Mean and SD values of $F_2$ (Hz) of vowels in four conditions. 194
63. Mean and SD values of $F_2$ in two age groups across conditions. 194
64. Percent type of transition in four conditions. 196
65. Percent type of transition in two age groups across conditions. 197
66. Correlation between percent dysfluency in speech and reading in three conditions. 201
67. Correlation between percent dysfluency and SPM. 202
68. Correlation between percent dysfluency and mean naturalness score in two tasks ($S =$ speech, $R =$ reading) and three conditions. 203
69. Correlation between SPM and mean naturalness score in two tasks, (S= speech, R = reading) and three conditions SPM. 203
70. Correlation between mean naturalness score in two tasks.

71. Correlation between percent dysfluency and acoustic parameters in two tasks (S= speech, R = reading) and three conditions.

72. Correlation between SPM and acoustic parameters in four conditions.

73. Correlation between overall naturalness and acoustic parameters in two tasks and four conditions.

74. Individual data on aerodynamic errors in three different conditions (A = aspirated, u = unaspirated, II = inspiratory intake, E = expiration, 1 = pre-therapy, 2 = post-therapy, 3 = 6-month post-therapy, + indicates presence, - indicates absence).

75. Individual data on laryngeal errors in three conditions (UV = unvoiced, V = voiced, pV= partially voiced, VC = voicing cessation, PV= prolonged voicing, VI A = Voice less aspirated, 1= pre-therapy, 2 = post-therapy, 3 = 6-month post-therapy, + indicates presence, - indicates absence).

76. Individual data on articulatory errors in three conditions (1= pre-therapy, 2 = post-therapy, 3 = 6-month post-therapy, + indicates presence, - indicates absence).

77. Individual data on multiple errors in three conditions (1 = pre-therapy, 2 = post-therapy, 3 = 6-month post-therapy, + indicates presence, - indicates absence).

78. Percent of subjects exhibiting different types of errors in three conditions (1= pre-therapy, 2= post-therapy, 3=6-month post-therapy).

79. Percent of subjects exhibiting different errors in two age groups in three conditions (1= pre-therapy, 2= post-therapy, 3=6-month post-therapy).

80. Mean values of % dysfluency (% dys), rate of reading (SPM), and mean naturalness score (MNS) in reading (R) and speech (S).

81 Mean duration of voice onset time (VOT), vowel (VD), total duration (TD) and voicing duration (VgD) in four conditions (all in ms).

82 Mean transition duration of F2 (ms) in four conditions.
