

A C K N O W L E D G E M E N T S

I am deeply indebted to Prof. R. K. Poddar under whose guidance this thesis was completed for not only initiating me into the adventure of scientific research but also unfolding in front of me the real perspective of science.

Gratitude goes to my fellow travellers and colleagues at the Biophysics Laboratory for providing me an altruistic and a truly academic atmosphere even under the extremes of stress and strain . This experience will always be cherished as a sweet memory.

The formative period of my research career was largely shaped by Dr. U. Chaudhuri, without his help things would not have been so easy for me.

The author was greatly benefited from the involved and fruitful discussion by Prof. V. Sasisekharan during the latter part of the work.

Thanks are also due to S. Saha and N. V. Joshi for their help in Computer Programming and to M. K. Basak for typing out the matter from a mess.

Financial support came from the Department of Atomic Energy, and the University Grants Commission.

Finally all said and done - this work was morally and emotionally supported (and this is most important) by three person my parents and my wife - of course being indebted to them has no meaning.
