Synopsis

I Introduction

II. Literature Review

1. Sex Determination and differentiation in mammals
   1.1 Events in sex determination and differentiation
   1.2 Genomic component
      1.2.1 Genetic control of sex determination
      1.2.2 Genetic control of sex differentiation
      1.2.3 Non-coding DNA in the regulation of sex determination
         1.2.3.1 Significance of Bkm minor satellite DNA
   13
   16
   21
   22
   23

2. WD family of proteins
   2.1 The sequence repeat
   2.2 The structural repeat
   2.3 Functional significance
   25
   26
   27
   28

3. Regulation of gene expression
   3.1 Regulation at transcriptional level
      3.1.1 Cis-regulatory elements
      3.1.2 Trans-acting factors
   3.2 Regulation at post-transcriptional level
   3.3 Regulation at translational and post-translational level
      3.3.1 Control of mRNA stability and degradation
   30
   31
   31
   33
   35
   36
   37

4. WDR13—an introduction
   4.1 The gene
   4.2 The transcript and the protein
   38
   39
   39
III. Materials and Methods

A. Materials

B. Methods

1. Expression analysis
   1.1 Multi-tissue expression array analysis
   1.2 RNA isolation
   1.3 Northern analysis
   1.4 RT-PCR analysis

2. Cloning and preparation of deletion constructs
   2.1 Directional cloning
   2.2 Polymerase chain reaction

3. 5' Rapid Amplification of cDNA Ends

4. Fluorescence in situ hybridization (FISH)
   4.1 RNA in situ hybridization
      4.1.1 Probe preparation by in vitro transcription
      4.1.2 Quantification of probe
      4.1.3 Preparation of slides
      4.1.4 Cryosectioning
      4.1.5 Pre-hybridization
      4.1.6 Hybridization and post-hybridization
      4.1.7 Fluorescence detection
   4.2 DNA in situ hybridization

5. Tissue Culture
   5.1 Maintenance of cell lines
   5.2 Transfection
   5.3 Cell lysate preparation and luciferase assay
   5.4 β-galactosidase assay

6. Gel retardation assays
   6.1 Annealing and end-labelling of oligonucleotides
   6.2 Preparation of nuclear extracts
6.3 Binding assays

7. Analysis of transgenic animals
   7.1 Tissue lysate preparation
   7.2 Bradford’s assay
   7.3 Tissue sectioning

8. Separation of testicular cells

9. Southern hybridization

10. Labelling of probes

11. Database and sequence analysis

12. Other general methods

13. Commonly used solutions

IV. Alternative splicing in the highly conserved \textit{WDR13/Wdr13} genes
   1. Introduction
   2. Results
      2.1 Alternative splicing in human gene, \textit{WDR13}
      2.2 Expression profiling of \textit{WDR13} and its splice forms
         \hspace{1em} 2.2.1 \textit{WDR13} is ubiquitously expressed in human tissues
         \hspace{1em} 2.2.2 Expression of \textit{WDR13} in transgenic animals
      2.3 Alternative splicing in mouse gene, \textit{Wdr13}
      2.4 Expression profiling of the mouse gene, \textit{Wdr13}
         \hspace{1em} 2.4.1 \textit{Wdr13} shows the cytoplasmic expression in tissue sections
         \hspace{1em} 2.4.2 Expression of \textit{Wdr13} in early stages of gonadal development
         \hspace{1em} 2.4.3 \textit{Wdr13} is predominantly expressed in the germ cells
         \hspace{1em} 2.4.4 Expression of the \textit{Wdr13} splice variants
      2.5 Protein Predictions
   3. Discussion
V. Regulatory analysis and functional characterization of \textit{WDR13/Wdr13}

1. \textit{Introduction} 74

2. \textit{Results} 74

2.1 Regulatory analysis of the human gene, \textit{WDR13} 76

2.1.1 Mapping of transcriptional start site 76

2.1.2 Sequence analysis of the putative promoter region 77

2.1.3 Deletion cloning of the putative promoter into luciferase reporter system 77

2.1.4 5'UTR of \textit{WDR13} shows maximum activity 78

2.1.5 Analysis of the role of 5’UTR 79

2.1.5.1 Testis-specific expression of the reporter gene 78

2.1.5.2 Translational repression in the other tissue of transgenic animals 79

2.1.5.3 Testis-specific translation of the \textit{WDR13} transcript 80

2.1.6 Regulation of smaller transcript by 5’upstream sequence 82

2.1.7 Regulation of \textit{WDR13} by 3’UTR 83

2.2 Regulatory analysis of the mouse gene, \textit{Wdr13} 83

2.2.1 5’RACE analysis 83

2.2.2 Sequence analysis of the promoter region 84

2.2.3 Deletion analysis of the mouse \textit{Wdr13} promoter region 84

2.2.4 Analysis of the \textit{Wdr13} 5’upstream promoter in transgenic animals 85

2.2.5 Regulation of expression by the \textit{Wdr13} 5’UTR sequence 85

2.3 Functional analysis of the \textit{Wdr13} chimeric mice 87

2.3.1 Introduction 88

2.3.2 Analysis of \textit{Wdr13} chimeric mice 88

2.3.2.1 RT-PCR 88

2.3.2.2 FISH 88

2.3.3 Analysis of \textit{Wdr13} knockout mice 89

2.4 Significance of the gene \textit{WDR13} in other possible functions 89

3. \textit{Discussion} 91
VI. Evolutionary conservation of the $WDR13$ gene

1. Introduction

2. Results
   2.1 $WDR13$ homolog from chimpanzee
   2.2 Evolutionary conservation of $WDR13$
   2.3 Phylogenetic analysis of $WDR13$
      2.3.1 $WDR13$ shows extensive functional conservation
      2.3.2 WD motif conserved in the homologs
   2.4 Conservation of non-coding sequences
      2.4.1 Genomic organization of the $WDR13$ homologs
      2.4.2 Intron variations across the phylogeny

3. Discussion

VII. Summary and Conclusions

VIII. References
