		<u>PAGE</u>
CHAPTER 1	Introduction	1-42
CHAPTER 2	Induced mutation and selection of a high yielding strain of <u>Aspergillus niger</u> for bioleaching of silica and iron oxide from bauxite ore and selection of the medium for the maintenance of mutant <u>Aspergillus niger</u> X ₁ .	43-56
CHAPTER 3	Effect of particle size and pulp densities of the bauxite ore on bioleaching of silica and iron oxide by <u>Aspergillus niger</u> X ₁ .	57-60
CHAPTER 4	Determination of optimum cultural conditions for bioleaching of silica and iron oxide from bauxite ore by <u>Aspergillus niger</u> X ₁ .	61-71
CHAPTER 5	Selection of suitable carbon and nitrogen sources on silica and iron leaching from bauxite ore by <u>Aspergillus niger</u> X ₁ and determination of their optimum concentration.	72-80
CHAPTER 6	Mineral element requirement of <u>Aspergillus niger</u> X ₁ for bioleaching of silica and iron oxide from bauxite ore.	81-90
CHAPTER 7	Effect of complex nutrients on bioleaching of silica and iron oxide from bauxite ore by <u>Aspergillus niger</u> X ₁ .	91-98
CHAPTER 8	Effect of amino acids, vitamins, metabolic inhibitors and antibiotics on bioleaching of silica and iron oxide from bauxite ore by <u>Aspergillus niger</u> X ₁ .	99-113
CHAPTER 9	Effect of surface active agents on bioleaching of silica and iron oxide from bauxite ore by <u>Aspergillus niger</u> X ₁ .	114-116
CHAPTER 10	Mechanism of silica solubilization.	117-148
CHAPTER 11	Biochemical changes during bioleaching of silica and iron oxide from bauxite ore by <u>Aspergillus niger</u> X ₁ .	149-152
DISCUSSIONS		153-158
