

List of Tables

1. Concentration of X in mg l^{-1} , in nutrient solution affecting the growth of seed plants.
2. Recent data on the concentrations of some dissolved element in river water ($\mu\text{g l}^{-1}$).
3. Gross fluvial fluxes of some dissolved and particulate trace elements to the ocean margins (units 10^{12}g y^{-1}).
4. Comparison of compositions of sediments from polluted and unpolluted estuaries (ppm).
5. Stationwise soil-characteristics.
6. Analytical characteristics of Humic (HA) and Fulvic acids (FA).
7. Potentiometric titration of Humic acid with respect to 0.1 N KOH $I=0.1$.
8. Potentiometric titration of Fulvic acid with respect to 0.1 N KOH $I=0.1$.
9. Maximum absorption and fluorescence wave number for undissociated and dissociated form of HA and FA.
10. Potentiometric titration of HA in presence of Co (II).
11. Potentiometric titration of FA in presence of Co (II).
12. Potentiometric titration of HA in presence of Zn (II).
13. Potentiometric titration of FA in presence of Zn (II).
14. Potentiometric titration of HA in presence of Fe (III).
15. Potentiometric titration of FA in presence of Fe (III).
16. Potentiometric titration of HA in presence of Cu (II).
17. Potentiometric titration of FA in presence of Cu (II).
18. Apparent (B) and conditional stability constants (K_c) for complexes of metals at $(30\pm 2)^\circ\text{C}$.

19. Conditional stability constants ($\log K_c$) for complexes between metal and ligands.
20. Adsorption isotherm data for different sediments at pH=4.5, Temp. $25 \pm 2^\circ\text{C}$, S%=11.7.
21. Adsorption isotherm data for different sediments at pH=4.5, Temp. $25 \pm 2^\circ\text{C}$; S%=23.4.
22. Partition coefficient values for metals with sediment at different salinities, pH=4.5, Temp 25°C .
23. $K_{\text{FeOx-M}}$ values for different sediments.
24. Thermodynamical parameters for adsorption isotherm at pH=4.5 and S%=11.3.
25. The average composition of dissolved, particulate and surface sediment with respect to trace metals.
26. Trace metal concentrations ($\mu\text{g.gm}^{-1}$ dry wet) in the tissue of *M. birmanica* from the Sundarban mangrove.
27. Monthly variation of zinc concentration ($\mu\text{g.gm}^{-1}$ dry wet) in the tissue of *M. birmanica* and its metabolic rate *in situ* condition.
