AIMS & OBJECTIVES
AIMS AND OBJECTS

The aims of the present thesis work have been targeted at elucidating the scope and mechanisms of immunotherapeutic approach in combating haematological malignancy using Biological response modifiers. The objective of the present work is therefore,

1. To identify the area of immunological interest during development of leukaemia.

2. To explore the concept of exploiting immunological components in leukaemic subjects.

3. To identify endogenous exogenous biomodulators for boosting up the immune status under the conditions and, finally,

4. To hint at the immunotherapeutic approaches in leukaemic subjects for disease recovery.
