

ACKNOWLEDGEMENTS.

The study of this problem was carried out in the Zoology Laboratory of the Poona University, during 1959-61, under the able guidance of Dr. K.R.Karandikar, the then Professor of Zoology and Head of the Department. I am deeply indebted to him for suggesting the problem and granting me all facilities and assistance throughout the course of this investigation. Special mention must be made of the personal interest and effort put in by him in the interpretation of the data and the preparation of the Thesis manuscript. In addition to his highly intellectual guidance, Dr. Karandikar has also been an unflinching source of inspiration and encouragement. I, therefore, wish to express once again my feelings of deep gratitude towards my guide for all the academic and technical help so kindly given to me in the course of this research work.

The writer also wishes to record his sincere thanks to Dr. L. Mulherkar, the present Professor of Zoology and Head of the Department, for giving laboratory facilities to complete the work.
