Acknowledgements.

I am very grateful to my supervisor, Dr. Alokesh Barua for very valuable guidance.

Prof. Ashok Guha not only has been a great source of inspiration but also gave me extremely useful comments and helped me out in times of need.

Pronab Sen has been a tremendous source of unconditional guidance and moral support.

I am grateful to Dr. Manmohan Agarwal for very useful comments.

Amal Sanyal gave me extremely useful suggestions on the methodology of estimating 'Allocative efficiency'.

Dr. N.C.B. Nath and Prof. Krishnamurthy gave me very useful suggestions, especially in the beginning of my struggle with the topic.

An empirical work of the present dimensions would not be feasible without the help of many other considerate individuals. My very good friend, Soloman Raj helped me right from the beginning with numerous computer packages and problems with his indomitable patience and sense of humour. Raju Talwar helped me with the linear programming package and estimations.

I am very grateful to all the managers of the firms, during my field study, who willingly gave me the required data and information regarding their units, but not to those who drove me off from their premises and also not to those who, instead of giving the required information, tried to
convince me that everything that is wrong with the Indian economy was due to researchers like me.

I am grateful to Indian Council for Research on International Economic Relations for the encouragement.

This thesis is dedicated to my mother, Indira Devi, in humility.

Murali Patibandla.
January 1991

"'It is important to learn and teach 'how to think (for oneself) rather than 'what to think'.'"

-- Jiddu Krishnamurthy.

"It is necessary to abandon the primacy of knowledge in order to establish that knowledge."
