ACKNOWLEDGEMENTS

I should like to place on record my deep sense of gratitude and indebtedness to the Indian Council of Agricultural Research for permitting me to utilise the data for this thesis.

I am very much pleased to record my thanks and gratitude to Dr. K.V. Ahamed Bavappa, formerly Director, Central Plantation Crops Research Institute, Kasaragod; Dr. N.M. Nayar, Director, CPCRI, Kasaragod; Dr. N.P. Jayasankar, Joint Director, CPCRI, Regional Station, Kayangulam and Dr. N.G. Pillai, Senior Scientist (Soil Science) and Project Coordinator (Coconut and Arecanut), CPCRI, Regional Station, Kayangulam, for providing the necessary facilities and for their interest and encouragement at every stage of the work.

I am immensely thankful to Dr. R.S. Aiyer, Professor and Head, Department of Soil Science, College of Agriculture, Vellayani, and Dr. M.V. Shantaram, Senior Scientist (Microbiology), CPCRI, Regional Station, Kayangulam, for their inspiring guidance and helpful criticisms in the preparation of the thesis.

It is a great pleasure to acknowledge the unfailing help I received from my colleagues whenever I asked it of them. I cannot possibly make adequate acknowledgement to all of them individually, though I would like to record my gratitude and thanks to Shri P.T.N. Nambiar, Statistician, CPCRI, Regional Station, Kayangulam, for his unstinted help and cooperation in the statistical analysis of the data.
It shall be a great omission if I fail to acknowledge the untiring help and cooperation, and the patience and forbearance of my wife throughout the course of the work and in the preparation of the thesis, and the little help I received from my daughter Miss Clare R. Cecil and my son Mr. Carl R. Cecil in the preparation of the thesis.

Kayangulam, 18-11-1981.  

S. Robert Cecil
