ACKNOWLEDGEMENT

I would like to express my heartfelt gratitude to Prof. B. S. M. Rao for his inspiration, invaluable guidance and constant encouragement throughout the course of this work. It has been a privilege to be associated with him first as an M.Sc. student and then as a research student.

I am indebted to Prof. H. K. Lee and Dr. C. Basheer at the Department of Chemistry, National University of Singapore (NUS), Singapore, where this work was done, for their support and supervision during my stay at NUS. It has indeed been a rewarding experience working with them. I would also like to thank madam Frances Lim for her technical assistance in HPLC.

I am extremely grateful to my lab mates, Mukula, Pooja, Manjusha and Parimal for their unlimited support and help. I will always remember the joyful atmosphere, the family feeling in the lab and those daily cups of tea. I will never forget their efforts for enriching my vocabulary and correcting my English pronunciation.

I would like also to thank my seniors, Avinash, Geeta, Kiran, Alam and Sameh for their assistance and friendship.

I would like to thank all my teachers who taught me in M. Sc. and developed my interest in this field.

Finally, I would like to acknowledge the financial support provided by University of Sana'a, Republic of Yemen.

Anass Ali Al-nedhary
