

CONTENTS

ABSTRACT

I. INTRODUCTION.

1.1	Background and Problem Formulation	1
1.2	overview of Database Management System	2
1.3	Database Design methodology	11
1.4	Database Design Example	19
1.5	The Traditional approach to Database Design	23
1.6	Research Objective	27
1.7	Importance of the study	28
1.8	Organization of the thesis	29
II	The Extended Entity-Relationship Model	
2.1	Basic elements of ER model	31
2.2	Other elements of ER model	37
2.3	Extended Elements of EER model	39
2.4	EER Diagrams	40
2.5	EERD representation in PROLOG	43
III	View modeling methodology	
3.1	Introduction	47
3.2	Review of view modeling methodologies	49
3.3	The view modeling methodology	55
3.3.1	Identify Entities	57

3.3.2	Identify Attributes	57
3.3.3	Identify Candidate keys	62
3.3.4	Identify Relationships	63
3.3.5	Define ISA hierarchies	73
3.3.6	Identify missing Relationships	77
3.3.7	Identify and resolve potential design problems	79
3.3.8	Iteration	83
3.3.9	Define Primary keys	84
3.4	Summery	86
IV	View Integration methodology	
4.1	Introduction	87
4.2	Review of view Integration methodologies	89
4.3	View Integration Methodology	93
4.3.1	View Selection	96
4.3.2	Naming Conflict Resolution	96
4.3.3	Type Conflict Resolution	113
4.3.4	Degree Conflict Resolution	121
4.3.5	Role Conflict Resolution	129
4.3.6	Cardinality Conflict Resolution	131
4.3.7	Hierarchical Conflict Resolution	133
4.3.8	Key Conflict Resolution	137
4.3.9	Merging	141
4.4	Summary	152

VI	View Translation	
5.1	Introduction	153
5.2	Preliminary Definitions and Notations	154
5.3	Well-Formed EER diagrams	159
5.4	Translation of a WF-EER Diagram to a Relational Database	168
5.5.	Summary	171

VI The Expert System VMITS

6.1	Chapter Overview	172
6.2	Logical Database Design Supports in VMITS	174
6.3	Internal Architecture of VMITS	177
6.4	Illustration of VMITS Session.	179
VII	Conclusion and Direction for future work.	193
