The Scheduled Castes are deprived in different aspects in society since immemorial days. Due to male dominated society, women are also deprived in different aspects in society. Together with, Scheduled Caste women are deprived in India and facing many problems in family and society. It is noted that, due to poverty, illiteracy, negligence and unemployment, they are also facing problems in their families. On the other hand, due to their caste associated problems such as social discrimination, atrocities, exploitation, untouchability, negligence, etc, they are also facing problems in society. Still many of such problems and challenges are faced by Scheduled Caste women in villages and backward areas. Hence, the present study is significant to analyze the problems and challenges faced by Scheduled Caste women in Gulbarga district. Gulbarga district is headquarters of Hyderabad-Karnataka backward region in Karnataka State.

Earlier, violence against Scheduled Caste women was common in family and society. Due to passing of legislations such violence is reduced considerably. Still, it is highlighted that the education of Scheduled Caste women is more backward as majority of Scheduled Caste women are neglected in their families with respect towards education. Further, due to lack of adequate health care facilities in rural and backward areas, their health conditions are critical. As these women are poor, they can't able to get nutritious food and live in hygienic environment. Consequently, Scheduled Caste women are facing many problems.

To empower Scheduled Caste women, the Government has formulated many of the welfare schemes such as reservation in education and employment, scholarships, fellowships, financial assistance to start self-employment programmes, financial assistance to form Self-Help Group, legislations to protect interests of Scheduled Caste women against caste and gender based violence, etc. Still, the statuses of Scheduled Caste women are facing many of
the problems in their families and society. Hence, the present study is made to explore the problems and challenges faced by Scheduled Caste women in Gulbarga district. The summaries of findings are as under.

7.1. Summaries of Findings:

None of the respondents have agreed that there is gender equality in their religion or castes.

Of all the respondents surveyed on the impact of caste or religion on society, 15.7% have agreed that religion or caste give social recognition, 30.7% have agreed that religion or caste help to extent caste or community relations, 14.7% have felt that religion or caste maintain harmonious relations in society, 22.7% have mentioned that religion or caste increase feeling of unity in religion or community and 16.0% have felt that religion or caste divides the society.

It is surprising to note that, only 51.2% of the total respondents are always regularly voting and electing their political representatives,
28.5% are somewhat regularly voting and 20.2% are not voting and electing their political representatives.

78. Of all the respondents surveyed, 8.2% have felt that politicians have not done anything for the development of their communities, 17.7% have remarked that they don’t find time for voting or not interested in politics, 20.0% have mentioned that their name is not included in voters’ lists, 2.7% have stated that voting is rewardless work and it is not applicable to 51.2% of the respondents as they are voting regularly.

79. On the determination of their votes in elections and of all the respondents, 5.7% have expressed that personal character of candidates determines their votes, 17.5% have stated that political party determines their votes, 22.7% have mentioned that religion or caste of candidate determines their votes, 33.7% have remarked that developmental contributions of the candidate to the constituency determines their votes and it is not applicable to 20.2% of the respondents as they have not exercised votes.

80. Only 4.2% have contested in the elections in the last 25 years, whereas 95.7% have not contested in the elections.

81. Of all the respondents, 1.5% were contested as Congress (I) candidates in elections, 0.5% were contested from Bharatiya Janata Party, 2.2% were contested as independent candidates and it is not applicable 95.7% of the respondents as they were not contested in elections.

82. Only 34.7% of all the respondents have agreed that there is adequate and equal representation for Scheduled Caste women in politics, whereas 48.5% have not agreed to the same and 19.2% have not expressed their views on the same.

83. Of all the respondents, 10.0% have agreed that there is need for women’s political party at local and national level, 14.0% have felt that there is reservation in politics at state and national level, 19.7% have mentioned that the political parties should give importance to women candidates, 2.2% have also given other suggestions and it is not
applicable to 54.0% of the respondents as they have already agreed that there is adequate and equal representation for women in politics or few of them can’t expressed their views on the same.

84. Only 33.7% of the total respondents have agreed that government is solving problems of backward Scheduled Caste women working in caste based occupations, whereas 59.2% have not agreed to the same and 7.0% have not expressed their views on the same.

85. Of all the respondents, 4.0% have expressed that there is need for more reservation and free compulsory education for Scheduled Caste women, 10.2% have stated that there is need for strict enforcement of legislations, 27.0% have mentioned that there is need for more welfare schemes for education and employment, 18.0% have agreed that there is need for gender and caste based reservation in employment and politics for Scheduled Caste women and it is not applicable to 40.7% of all the respondents as they have agreed that the Government is solving problems of Scheduled Caste women.

7.2. Discussion and Conclusion:

Many of the studies already conducted have proved that employment or self-employment or income generating activities have given women status and respect in family and society. On the other hand, the unemployed housewives have lower status compared to employed or self-employed wives. Hence, to assess the status of employed or self-employed women and also unemployed housewives, both types of respondents were selected for the present study. Further, as the literacy is lower among Scheduled Caste women, age determines the knowledge. As such, the Scheduled Caste women from all age groups were selected for the present study.

It is highlighted that though Scheduled Castes are converting their original Hindu religion into other religions, their number is meager. Only a few of the Scheduled Caste women are converted into other religions so as to become free from caste based atrocities, inequalities, discrimination, etc.
Holey, Chaluvadi, Madiga, Banjara, Lambani and Bhovi castes are dominated among Scheduled Castes in Gulbarga district. Hence, almost respondents belong to these communities and castes. Almost all the respondents are married and living with their husbands. Majority of the Scheduled Caste women are low-educated, that is primary or secondary education.

Though joint families are disappearing due to modernization, it is emphasized that majority of the Scheduled Caste women are living in joint families and majority of the Scheduled Caste women are from Gulbarga city or towns. Equal proportions of the Scheduled Caste women surveyed under the study are living in their own houses, rented houses or sheds or temporary settlements in slum areas. A great majority of the respondents are facing problems related to their residential environment and the particular problems include, poor sanitation, scarcity of drinking water, poor roads, poor transportation, lack of health centres, etc.

It is surprising to note that though Scheduled Caste women are employed or self-employed, still many of them don’t have voice in family decision making. Hence, it is essential that the Scheduled Caste women have to be given with decision making in their families. Considerable numbers of respondents are having more number of children and it is essential that they must have to realize the significance of small family. Majority of these women are facing subjugated or dependent status in their families. Though many of the religious practices are banned by law, still an overwhelming majority of the respondents believe in many practices. The particular practices believed and practiced include Devadasi, Jogini, Nude Service, dowry practice, animal dedication to deities, etc.

The study disclosed that marital relations of almost all the respondents are satisfactory or best. Still, the respondents are facing violence of different from their husbands. These violent acts include physical such as abuse, physical attack, etc. or psychological such as depression, humiliation, etc. The violence by husbands or family members is due to alcoholism of husband, dowry, gambling, etc. Though few of the Scheduled Caste women are facing
domestic violence of different types, there were not registered complaint with police against their family members and it is due to fear of family disorganization or against social custom or even fear of loss of respect in society. Majority of the respondents have expressed that they have equal and cooperative attitudes from their husbands.

As stated by majority of the respondents, society is cooperative, sympathetic and helpful towards Scheduled Caste women. Still as agreed by few of the respondents, society has attitudes of negligence, showing inferiority, untouchability, discrimination and even alienation. Comparatively, less numbers of Scheduled Caste women are facing exploitation and harassment in society. Such exploitation is more in terms of more psychological than physical. The Panchayats, Police, Caste leaders, Caste Associations, etc are playing important role in preventing violence and atrocities against Scheduled Caste women. Though, few of Scheduled Caste women are facing many problems in their families and society, still they are very much satisfied or somewhat satisfied in their social life.

Education background of the Scheduled Caste women surveyed is poor, as father and mothers of majority of the respondents are illiterates or completed only primary or secondary education. As such, nearly half of the respondents have faced deprivation in their education. Such deprivation is due to caste and gender inequality, poverty, negligence, illiteracy of parents, etc. It is surprising to note that, though facilities such as reservation, scholarships, etc are provided by the government for Scheduled Caste children, still many of the Scheduled Caste women have stated that their children are not interested in education and drop outs from schools or colleges. But, majority of the respondents have realized the significance of education in life of women and as such they have supported for women’s education. Good employment and better marriage prospects are major aims of female education as stated by majority of the respondents, who supported female education. It is believed by few of the respondents that if females are highly educated, then suitable bridegrooms or even they thought that girls are for household work only. It is noted that for the
improvement of education among Scheduled Caste women, considerable numbers of respondents have suggested for internal reservation based on individual caste or community.

Health status of majority of the respondents is always fine with minor problems. During illness, majority of the respondents are visiting to public hospitals and few of the respondents are also visiting to private hospitals or private clinics. As stated by majority of the respondents, health centres are less than 20 Kms from their residences. Few of the respondents are facing discrimination from the doctors due to their castes.

On the reservation policies, considerable numbers of respondents have mentioned that the present reservation system is satisfactory and internal reservation is also suggested by the respondents. Higher Education for Scheduled Caste women, passing of strong legislations against atrocities, increase of awareness on atrocity laws in society and quick settlement of atrocity cases are recommended by the respondents to prevent violence and atrocities against Scheduled Caste women.

Though the occupations are based on castes, due to the evils associated to their castes, the ancestors may have changed their family occupations. Hence, as stated by only a few of the respondents their family occupation is caste based and majority of the respondents have stated that their family occupation is agriculture, animal husbandry, business, industry, self-employment or employment in organized or unorganized sector. As such, the employed or self-employed women are also working in these types of employment.

The reasons for employment as stated by the respondents show that, they taken employment to support family economically, to become economically independent and to make use of their education or skills. It is noted that majority of the husbands of the respondents are engaged in unorganized sector employment. It shows that they are facing problems that are faced by workers working in unorganized sector.
Annual income of majority of the employed or self-employed respondents shows that it is lower as they are earning less than Rs. 36000 per annum. Averages annual income of the families of the respondents disclosed that majority of the respondents are living in lower middle class families. Consequently, the worth of properties owned by the respondents and their families is smaller. Considerable proportion of the Scheduled Caste women are suffering from problems of inadequate income compared to their family expenses. To manage their family expenses, the respondents are reducing unnecessary expenses or work for overtime or even borrow loans, whenever there are more expenses.

Few of the employed respondents or self-employed respondents are also facing the problems of role conflicts, family quarrels, anxiety, lack of care towards elders, husband and children, tension, ill health, etc., due to their outside work. On the other hand, working respondents have gained more benefits from their employment or self-employment. The employed or self-employed women have gained benefits such as economic security, economic independence, improved standard of living, participation in family decision making, gender equality, etc. Nearly half of the respondents are members to Self-Help Groups. The benefits gained from their participation in Self-Help Groups shown that, economic security, economic independence, financial assistance for self-employment and socio-economic equality in family and society. Though majority of the employed or self-employed respondents are getting benefits such as more status, economic benefits, etc., still few of the respondents have felt inferior as they are engaged in lower status job. Due to their employment or self-employment, majority of the employed or self-employed respondents are personally recognized in society and even getting appreciation and cooperation in society. Even a few of the employed or self-employed respondents have gained caste and gender equality due to their employment. On the other hand, unemployed housewives have subjugated status or dependent on husband and even few of these respondents are neglected in family. Of course, many of housewives are treated as equal to all
family members. Though unemployed housewives have lower socio-economic status, still they have more social contacts and cordial relations in society.

Though many of the social welfare schemes are formulated by the Government for the welfare and empowerment of Scheduled Castes in general and Scheduled Caste women in particular, still only few of the respondents have gained benefits from one or more of these schemes and majority of the respondents have not gained benefits from these schemes.

All the Scheduled Caste women believe in religion and castes and as such, they are visiting holy places frequently that are weekly, monthly, daily or occasionally. Almost all the respondents are believed and participate in religion or caste based socio-cultural activities. As such apart from their support and encouragement to these activities, many of the respondents are participating in different caste based arts such as play, playing folk musical instruments, singing, folk songs, etc. A few of the respondents are also not participating in these activities as they are not interested or they have no time to participate in such socio-cultural activities. As expressed by all the respondents, there is no gender equality in their communities or castes. Though majority of the respondents have agreed that religion or caste give social recognition, help to extend caste or community relations, maintain unity and harmonious relations.

It is surprising to note that few of the respondents have not exercised their votes and elected their political representatives. Half of the respondents vote and elect their political representatives regularly. It is emphasized that many of the respondents have not satisfied as their political representatives have not done anything for the development of their communities. Due to lack of time, no interest in politics and exclusion of their names in voters’ lists, few of the respondents have not exercised their votes in elections. Of course, development of constituency is major factor to exercise their votes in elections. It is also noted that religion and caste are also most important while electing the political representatives. Here it is surprising to note that though Scheduled Caste women were suffered due to their caste in society, still they are giving importance to their castes and communities. The political party and personal
character of the candidate are also important factor while exercising their votes as expressed by few of the respondents. Only a few of the respondents have also contested in elections by contesting as independent candidate or through Congress (I) or Bharatiya Janata Party. It is emphasized that majority of the Scheduled Caste women have agreed that there is inadequate political representation for Scheduled Caste women in politics. For this purpose, as suggested by the respondents, there is need to provide importance to women candidate by political parties, provide reservation at state and national level politics and also start women’s political party at national and local level.

The respondents are not satisfied with the Government for not solving the problems of Scheduled Caste women working in caste based occupations. The measures to develop Scheduled Caste women in society as stated by the respondents’ shows that, there is need to form more welfare schemes and provide adequate caste and gender based reservation in employment and politics. Even few of the respondents urged for the free and compulsory education and strict execution of legislations.

To conclude, above study is made it clear that, Scheduled Caste women are more orthodox as they believe in caste based rituals. To a greater extent, lower education is main reason for the same. Further, due to such rituals, they are facing gender inequality in their families and they are also subjected to violence and atrocities in society. Due to all these factors, when psychological state of the Scheduled Caste women is explored, it is found that majority of these women are feeling inferior due to their caste and gender. Hence, it is essential to increase self-confidence among Scheduled Caste women. Compared to self-employed or employed Scheduled Caste women, unemployed housewives are suffering from more problems. Of course, employment or self-employment has given Scheduled Caste women status, equality and respect apart from economic benefits. Hence, it is essential to empower unemployed housewives among Scheduled Castes.
To serve this purpose, wherever necessary, it is essential to provide basic education to these women. Further, it is needed to provide self-employment training to these women, so that they can earn and generate their own income. Though there are good numbers of schemes of self-employment, many of these women are not aware about these schemes. Hence, it is necessary to increase awareness of Scheduled Caste women in self-employment training, financial assistance, education, empowerment, etc. Self-Help Groups are playing important role in empowerment of Scheduled Caste women. Hence, it is suggested to Panchayats, Banks, Non-Governmental Organizations and Anganawadis to increase awareness about benefits of Self-Help Groups, self-employment, income generating activities, etc and help Scheduled Caste women to get benefits from different schemes of the Government formulated for the welfare of Scheduled Caste women.

7.3. Suggestions from the Study:

Following suggestions are made from present research study.

1. It is suggested to forward castes, especially Hindu people to realize the social equality and as such, they treat Scheduled Castes as equal in society, so that, Scheduled Castes must not convert their Hindu religion to other religions.

2. It is suggested to awareness about significance of education for Scheduled Castes. Hence, free and compulsory education up to 10th standard should be given to all people and Scheduled Caste women must send their children to schools to get education.

3. The local Governments such as Municipalities and Panchayats must have to study the problems faced by the people and must try to improve basic facilities such as health care, education, roads, transportation, pure drinking water, sanitation, etc., so as to enable healthy residential environment.
4. It is suggested to Scheduled Caste men to realize the gender equality and give importance to women and get their suggestions in their families while making family decisions.

5. Scheduled Caste women realize the gender equality and as such, they persist for their equal rights in marital relations.

6. Scheduled Caste women must give up orthodox rituals, evil practices and blind beliefs such as Devadasi, Nude Service, dedication of animals to deities, child marriage, dowry, etc., and support good practices such as widows’ remarriage.

7. It is essential to restrict alcoholism, gambling, etc., which are spoiling society and also encouraging domestic violence and violence against women.

8. The people and society must realize the caste and gender equality and provide equal importance to all castes including Scheduled Caste women in socio-economic, education and political aspects.

9. Strict legislations should be passed against violence, discrimination and atrocities against Scheduled Caste women in their families and at public places.

10. It is suggested to Scheduled Caste women to get education or develop skills of employment or self-employment and must participate in outside work, so that they gain economic benefits along with socio-economic and political benefits.

11. It is suggested to unemployed housewives of Scheduled Castes to form Self-Help Groups and participate in Self-Help Groups so as to participate in income generating activities.

12. It is suggested to Non-Governmental Organizations and Panchayats to organize mass awareness camps on the social welfare schemes of the Government for the welfare of Scheduled Caste women and help these women to get benefits from these schemes.
13. Scheduled Caste women must realize that no caste has provided subjugated status to women and hence, they urge for equal status in their castes.
14. It is suggested to Scheduled Caste women to exercise their votes regularly in elections and elect their political representatives, who develop their community, caste and constituency.
15. It is suggested to political parties at the local and national level to provide adequate representation to women in general and Scheduled Caste women in particular.
