ACKNOWLEDGEMENT

The endless thanks goes to Lord Almighty for all the blessings he has showered on to me, which has enabled me to write this last note in my research work. During the period of my research, as in the rest of my life, I have been blessed by Almighty with some extraordinary people who have spun a web of support around me. Words can never be enough in expressing how grateful I am to those incredible people in my life who made this thesis possible. I would like an attempt to thank them for making my time during my research, a period I will treasure.

I would like to thank Hon. CEO, Hon. Vice chancellor and Registrar of Pravara Institute of Medical sciences for providing me the administrative support, facilities and infrastructure to complete my thesis work.

First and foremost I want to thank my advisor Dr. Subhash Khatri. It has been an honor to be his first Ph.D. student. I would like to thank him for encouraging my research and for allowing me to grow as a researcher and professional. His advice on both research as well as on my career have been priceless. His mentorship was paramount in providing a well-rounded experience consistent my long-term career goals. He encouraged me to not only grow as a researcher but also as a good teacher and an independent thinker. From him I have learned to think critically, to select problems, to solve them and to present their solutions. His drive for scientific excellence has pushed me to aspire for the same. He was the best choice I could have made for a Ph.D advisor. I also remain indebted to Dr. Abhijit Diwate , Professor, DVVPF,COPT for his understanding and support during the times when I was really down and depressed. He always stood behind and believed in me when I was about to give up. Without his encouragement and constant support, I could not have finished this thesis.

I would also like to thank Dr. Sushil Kachewar, Professor, Department of Radio diagnosis. I am grateful for his many helpful suggestions on this manuscript and enduring encouragement. Without his radiological diagnosis of participants, it was merely impossible to start and end the research. His enthusiasm for research has always helped me to see the bigger picture. He has guided me with his invaluable suggestions, lightened up the way in my darkest times and encouraged me a lot in the academic life.

A special word of gratitude to Dr. A.P. Kulkarni, Professor, Department of Community Medicine, RMC, Loni for helping me with statistical analysis and clearing my doubts about
research design and methodology. Dr. Rahul Kunklol, Director Research for always listening to me and never failing a discussion on aspects of research. I am thankful to him for inspiring me to never give up, patiently helping me find ways I didn’t see to solve various problems.

My sincere thanks must also go to the members of my thesis pre PhD assessment committee. They generously gave their time to offer me valuable comments toward improving my research work. Their constructive criticism helped me develop a broader perspective to my thesis. I am also indebted to all my friends and colleagues not only for all their useful suggestions but also for being there to listen when I needed an ear.

I also place on record, my sense of gratitude to all participants of this research. Thesis could not have been possible without you all.

A special thanks to my family. Words cannot express how grateful I am to my wife Ashwini for all of the sacrifices that you’ve made on my behalf. Your prayer for me was what sustained me thus far. There were times during the past six years when everything seemed hopeless and I didn’t have any hope. I can honestly say that it was only her determination and constant encouragement that ultimately made it possible for me to see this thesis through to the end. Finally I would like to acknowledge the sacrifices of my lovely daughther Divayni and my Son Deven and thankful to them for trying to take my mind off the thesis at home.
