CHAPTER I	
INTRODUCTION	1
References for chapter I	
CHAPTER II	
SPECTRAL DISTRIBUTION THEORY - A REVIEW	8
<u>2.1</u> Eigenvalue density of the Hamiltonian in large shell model spaces and its moments	
<u>2.2</u> Polynomial expansion of strength and expectation value	
<u>2.3</u> Configuration partitioning for the strength and expectation value	
<u>2.4</u> Strength and expectation value density formalism	
<u>2.5</u> Strength and expectation value in multipole form	
<u>2.6</u> Propagation of operator averages and trace evaluation	
References for chapter II	
CHAPTER III	
APPLICATION OF SPECTRAL DISTRIBUTION THEORY USING WILDENTHAL'S SD INTERACTION	28
<u>3.1</u> Wildenthal's universal sd interaction	
<u>3.2</u> Approximate smoothed forms for the density of states	

3.3 Evaluation of binding energies, excitation spectra
and occupancies

References for chapter III

CHAPTER IV GAMOW -TELLER AND ISOVECTOR M1 EXCITATION STRENGTH SUMS

42

4.1 Gamow-Teller and isovector M1 excitation operators

4.2 Gamow-Teller sum rule : an approximate method

4.3 Gamow-Teller and isovector M1 sum rule strengths by
spectral distribution methods

A. Gamow-Teller sum rule strength in fp shell

(i). Using the polynomial expansion (R-strength)

(ii). Using the expectation value density (S-strength)

B. Gamow-Teller and isovector M1 sum rule strengths in sd
shell

(i). By R-strength

(ii). By S-strength

References for chapter IV

CHAPTER V STRENGTH DISTRIBUTION BY SPECTRAL DISTRIBUTION THEORY

76

5.1 The method

5.2 Results and discussions

References for chapter V

CHAPTER VI BETA DECAY RATES OF $A > 60$ FP SHELL NUCLEI FOR
PRESUPERNOVA STARS

86

6.1 Motivation

	<u>6.2</u>	The model	
	<u>6.3</u>	Results and discussions	
		References for chapter VI	
CHAPTER VII.		CONCLUSIONS	103
APPENDIX <u>A</u>		THE ORTHONORMAL POLYNOMIALS RELATED TO THE EIGENVALUE DENSITY	105
APPENDIX <u>B</u>		EDGEWORTH, GRAM-CHARLIER AND CORNISH-FISHER EXPANSION	106
APPENDIX <u>C</u>		EVALUATION OF AVERAGES OF ISOSPIN SCALAR AND NONSCALAR OPERATORS	109
ADDENDUM
