

List of Tables

	Page
3.1a Socio-demographic characteristics of girls, by place of residence	49
3.1b Descriptive statistics for certain major life events of the girls, by place of residence	50
3.2.1a Prevalence of general morbidity among the girls, by place of residence	51
3.2.1b Distribution of girls according to treatment sought for general morbidities, by place of residence	52
3.2.1c Distribution of girls according to type of treatment sought for general morbidities, by place of residence	53
3.2.2a Prevalence of reproductive health problems among girls, by place of residence	54
3.2.2b Distribution of girls according to treatment (of any kind) sought for reproductive health problems, by place of residence	55
3.2.2c Prevalence of reported reproductive morbidities among girls, by socioeconomic and demographic variables	56
3.2.2d Treatment seeking for reported reproductive morbidities among girls, by socioeconomic and demographic variables	57
3.2.2e Prevalence of reported reproductive morbidities among married girls, by socioeconomic and demographic variables	59
3.2.2f Treatment seeking for reported reproductive morbidities among married girls, by socioeconomic and demographic variables	60
3.2.3a Sociodemographic characteristics of the girls according to tertiles of dietary pattern score	62
3.2.3b Anthropometric measures and blood pressures across tertiles of dietary pattern score adjusted for age and place of residence	64
3.2.3c Dietary behaviours and weight concerns among girls, by place of residence	65
3.2.3d Dietary behaviour and weight concerns among girls, by marital status	66

	Page
3.2.3e Anthropometric measures of girls with dissatisfaction over body weight and urge for dieting	68
3.2.3f BMI categories of girls with dissatisfaction over body weight and urge for dieting	68
3.2.3g Results of logistic regression for body weight concern (dissatisfied vs. satisfied), dieting behaviour (urged for dieting vs. did not urge for dieting) among girls in relation to certain sociodemographic variables and body mass index	69
3.2.4a Mean values, 95% CI, and results of ANOVA for certain anthropometric, blood pressure, haematological and biochemical variables, by place of residence	70
3.2.4b Bivariate analysis of anthropometric and haematological parameters, by place of residence	71
3.2.4c Correlation coefficients for certain anthropometric, physiological and haematological variables	72
3.2.4d Results of logistic regression for unfavourable health outcomes with socioeconomic and anthropometric variables	73
3.3.1a Distribution of girls according to exposure to various media devices, by place of residence	74
3.3.1b Level of exposure of girls to various media devices, by place of residence	75
3.3.1c Choice of girls for channels/bands of radio and television programmes, by place of residence	76
3.3.2a Level of awareness of girls on issues related to reproduction, by place of residence	77
3.3.2b Distribution of girls on their knowledge on issues related to reproduction as imparted at school, by place of residence	78
3.3.2c Awareness of girls about certain reproductive health issues, by socioeconomic, media, social interaction variables	79
3.3.2d Results of logistic regression models fitted between awareness of reproductive health issues and socioeconomic, media and social interaction variables among girls	80

	Page
3.3.2e Level of awareness of girls on puberty characteristics, by place of residence	81
3.3.2f Reported incidence of premarital sex among adolescents, by place of residence	82
3.3.3a Awareness of married girls on contraceptive methods, by place of residence	83
3.3.3b Distribution of married girls on their use of contraceptives, by place of residence	83
3.3.4a Girls' views on 'qualities of girls liked by boys', by place of residence	84
3.3.4b Girls' views on 'qualities of boys liked by girls', by place of residence	85
3.3.4c Girls' views on certain issues of sexual behaviours and sexuality, by place of residence	86
3.4.1a Topics discussed by girls in recent past on certain reproductive health issues, by place of residence	87
3.4.1b Distribution of girls receiving advice on certain reproductive health issues in the recent past, by place of residence	87
3.4.1c Distribution of girls who discussed certain sexual and reproductive health issues in recent past, by place of residence	88
3.4.1d Distribution of married and unmarried girls who discussed certain reproductive health issues with members of the society in recent past, by place of residence	90
3.4.1e Distribution of married and unmarried girls who received advice on certain reproductive health issues by members of the society in recent past, by place of residence	91
3.4.2a Perception of girls about their own family environment, by place of residence	93
3.4.2b Girls' views and experiences on sexuality, by place of residence	94
3.4.2c Girls' views about age at courtship and marriage in the neighbourhood, by place of residence	95
3.4.2d Girls' preferences and views on issues related to marriage, by place of residence	95

	Page
3.4.3a Girls' views about gender bias on certain social issues, by place of residence	96
3.4.3b Girls' views on the role of husband and wife in family, by place of residence	97
3.4.3c Girls' views on certain gender role issues, by place of residence	99
3.4.4a Reported incidence of risky sexual behaviours among girls, by place of residence	101
3.4.5a Descriptive statistics for perceived family types and sexual attitude, by place of residence and results of ANOVA	103
3.4.5b Correlations between age, family environment parameters and sexual attitudes among girls	104
3.4.5c Hierarchical regression models that regressed participant's sexual attitudes, by place of residence, marital status, and family environment parameters	105
