# CONTENT

Chapter I

**Introduction**  

Chapter II

**General Theory of Photon Correlation**  

2.1 Basic Aspects of Photon Correlation Spectroscopy  
2.2 Correlation Function for Concentration Fluctuation  
2.3 Size Determination  
2.4 Polydisperisty Analysis  

Chapter III

**Materials and Method**  

3.1 Materials  
3.1.1 Methylene Blue  
3.1.2 Uranine  
3.1.3 Smoke  

3.2 Method  
3.2.1 Experimental Set-up  
3.2.2 Sample Preparation  
3.2.3 Temperature Controller  
3.2.4 Signal Processing  
3.2.5 Calibration of Experimental Set-up  
3.2.5a The Rotating Ground Glass  
3.2.5b Polystrene Latex Beads
Chapter IV

Expérimentional Results

4.1 Size
   4.1.1 Methylene Blue 48
   4.1.2 Uranine 49
   4.1.3 Smoke 49

4.2 Effect of Concentration
   4.2.1 Methylene Blue 50
   4.2.2 Uranine 51
   4.2.3 Smoke 52

4.3 Effect of Temperature
   4.3.1 Methylene Blue 53
   4.3.2 Uranine 54
   4.3.3 Smoke 55

4.4 Size Distribution
   4.4.1 Methylene Blue 56
   4.4.2 Uranine 57
   4.4.3 Smoke 57

4.5 Time Evolution of Size Distribution
   4.5.1 Methylene Blue 58
   4.5.2 Uranine 59
   4.5.3 Smoke 60

Chapter V

Discussion 62

Appendix I

Applications of Photon Correlation Spectroscopy 67
