ACKNOWLEDGEMENT

I am grateful to Dr. V. K. Jain, Associate Professor, SES, JNU, New Delhi, for his valuable guidance in preparing the thesis on hands. His sincere supervision, constructive criticism and thorough evaluation of the contents helped me immensely in conceiving and writing this compendium of research.

I acknowledge my regards to the deans of the school, Prof. Anjali Mukherjee, Prof. V. Asthana, Prof. L. K. Pandey, prof. C. K. Varshney and the incumbent one Prof. V. Subramanian for their sustained encouragement and the facilities they provided me to accomplish the research.

There are times up and down in life. I have traversed through the vicissitudes in my career while carrying out the research which is however no one man job. There were moments of despairs and hopelessness when I was likely to give in. On all such occasions my friends and well wishers came like angels and resuciated patience, rejuvenated vigour and rekindled hopes in me. Without their emotional comfort and affectionate help, I would have not been able to honour my pledge, keep date with the tryst and fulfil a long cherished dream come true. Taking advantage of this occasion I would like to pay my deep sense of indebtedness and gratefulness to my such friends as their wishes and prayers have borne out fruits.

I am glad to acknowledge my deep sense of obligation and heart-felt appreciation to my brotherly Mansoor Alam Ansari, research scholar, SLS. He came forward to help me out of the seemingly impasses. He provided me moral and academical help in giving the final touch to the thesis. It is his untiring efforts and versatile genius which helped me in beating the deadline of submitting the thesis. The credit for this goes to him.

I am deeply touched by the friendly gesture of Dr. Noor Alam, SLS. He devoted his precious time for my thesis and enriched me with his expertise in computerics and technical knowhow.

I am obliged to Mr. Kamlakar and Pramod kumar Singh, SES for their intellectual help and cooperation. I thank my lab mates Anand, Krishna, B. Bihari, Naresh, Bhavesh and my well wishers, Vajpayee, Rafique, Ghani, Pasha to name a few.

I must not fail to mention my thanks and gratitudes to Mr. Md. Nazmuddin, Research Scholar, CSRD, JNU for his scholarly help. His Invaluable helps include software package and running the computer making the Noise Prediction Model a success. I sincerely feel that without his help the thesis would have not seen the light of the day.

I am equally obliged to Dr. B. L. Gupta, Research Associate, SLS for his precious help in preparing the thesis in the present shape and form.

I do acknowledge my thanks and love to Shaiba for patience and endurance.

At the last but not the least I do acknowledge UGC/CSIR (NET) for JRF/SRF.

( Anwar Hussain)
