LIST OF TABLES

2.1 Analogous properties of a classical bit and a quantum bit 23
2.2 Inversion Operation, Z operation and Hadamard Operation 23
2.3 Spintronic cost to realize $C^\dagger$ NOT with the help of ancillary bits 25
2.4 Functionally complete set of instructions 27
3.1 Trace of a variable in different MPRM form of a switching Function 34
3.2 Bijection that maps a given polarity to a desired one in MRRM form 40
3.3 3^d different basis vectors associated with 3^d different MRRM forms 43
3.2 Bijection that maps a given polarity to a desired one in MRDRM form 45
4.1 Comparative study of ‘optimal garbage bit-counter’ 63
and ‘optimal cost bit-counter’ with existing (Maslov’s) work 73
5.1 Illustration of Multiplication with the 3-bit numbers $(a_2 a_1 a_0)_2 \& (b_2 b_1 b_0)_2$ 77
6.1 Some useful properties of Multistage Interconnection Network (MIN) 78
6.2 Some Frequently used bijections (FUB) in MIN 78
6.3a Path matrix in a SEN that realizes the permutation (4 5 6 7 0 1 2 3) 80
6.3b Path matrix in a SEN that realizes the permutation (1 2 3 4 5 6 7 0) 80
6.3c Path matrix in a SEN that realizes the permutation (2 3 4 5 6 7 0 1) 80
6.3d Path matrix in a SEN that realizes the permutation (3 4 5 6 7 0 1 2) 80
6.3e Path matrix in a SEN that realizes the permutation (5 6 7 0 1 2 3 4) 81
6.3f Path matrix in a SEN that realizes the permutation (6 7 0 1 2 3 4 5) 81
6.4a Control structure of a SEN that acts as a Barrel Shifter 81
6.4b Control structure of a Butterfly Network that acts as a Barrel Shifter 83
6.5 In-place left shifting of an ordered sequence (Illustration of lemma 6.3) 87
6.6 Expressions for dividends at different stage of gcd Algorithm 89
6.7 Comparative study of the reversible Barrel Shifters 90
7.1 A list of deBruijn sequences and corresponding characteristic function 98
A.1 A Truth Table for $C\text{NOT}$ gate 115
B.1 Traversal of a singly linked list 117
B.2 Bi-directional traversal using a singly linked list 118
B.3 In place reversal of singly linked list 119
B.4 Pre-order traversal of a binary search tree 120
B.5 In-order traversal of a binary search tree 121
C.1 Some relevant benchmarks 122
C.2 Some new benchmarks as suggested by this work 123
