

## CONTENTS

### INTRODUCTION

### PREVIOUS WORK

- Calcium as a Second Messenger 4
- Calmodulin in Plants 8
- Regulation of Enzymes by Calmodulin in Plants 12
- Physiological and Cellular Functions Regulated by Calcium and Calmodulin 22
- Role of Calcium in Light Mediated Processes 33
- Role of Phosphoinositides 37

### MATERIALS AND METHODS

- Plant Material and Growth Conditions 43
- Purification of Calmodulin 45
- Purification of Glutamate Dehydrogenase 48
- Glyoxalase Extraction 50
- Isolation and Purification of Inside Out Vesicles 51
- Enzyme Assays 52
- Gel Electrophoresis 55
- Study of Calcium Uptake 59
- Lipid Extraction 61
- Protein Estimation 63
- Light Sources 64
- Chemical 65

### RESULTS

- Phytochrome Regulation of Calcium Uptake 66
- Calmodulin Purification 75
- Regulation of Enzymes by Calcium and Calmodulin 89
- Effect of Phytochrome on NADH-Glutamate Dehydrogenase 102
- Role of Calmodulin in Cell Proliferation in Callus Cultures of Amaranthus paniculatus 110
- Evidence for the Involvement of Phosphatidylinositol Cycle 118

### DISCUSSION

- Phytochrome regulation of calcium uptake 135
- Difference in Calmodulin Activity from Seeds, Shoots and Roots 139
- Regulation of Enzymes by Calmodulin and Phytochrome 141
- Role of Calmodulin in Cell Proliferation 148
- Involvement of Phosphoinositides in Agonist-mediated Responses 150
- Overall View 155

### SUMMARY
