ACKNOWLEDGMENTS

I am grateful to my supervisor, Dr. Alok Bhattacharya, who has been a constant source of encouragement and inspiration in these five years of association. I am equally grateful to Dr. Sudha Bhattacharya whose patience and ability to guide me have proved to be invaluable and taught me so much. This team not only provided the facilities to pursue research but has given more than what can be penned down here.

In Dr. Louis Diamond (N.I.H., U.S.A.), I found a person whose dedication to the very basics of science, namely, maintenance and developing of media for axenic cultures was phenomenal. I thank him for all the species and strains of Entamoeba.

Acknowledgements are due to Dr. Hira Nakasi (N.I.H., U.S.A.) and Prof. Asis Datta (J.N.U) for supporting this work in so many ways. I wish to thank my labmates Ramasare, Reena, Ramu, Vivek, Devinder, Monika, Suman, Gopal, Nagendra and Dr. Azam for innumerable suggestions and discussions during the course of this work. Special thanks are due to Devinder for the excellent maintenance of cultures of Entamoeba in the lab.

I am indebted to Drs. K. Ganesan and K. Natarajan for their help at just about any point of time. I thank Dr. Raj Bhatnagar, Selvam, Kumud and Naresh for their help at various times.

My acknowledgements to the friends who have made my life over here worthwhile which include Kumud, Vrushank and Valsala.

My thanks to the CIF staff Ahmed, Khan and Alex for their cooperation in the Central Instrumentation Facility.

I thank Profs. S.P. Modak, D.N. Deobagkar, D. Banerji and A. Raman, who in the course of my pursuit of the "terminal degree", have helped me.

I thank Chari for making life in the mess called, Bioinformatics Centre, easier.

I also thank my laboratory technicians, Umesh, Sajjan and Satbir
without whose help, this work would have taken ages.
I am grateful to my parents and the various Jesuit institutions
which I passed through for the value systems which I have inherit-
ed.
I also wish to thank the University Grants Commission for providing
me fellowship.
I am grateful to my parents for their patience of the last thirty
years and to my brothers, Prasad and Anand who all have made life a
pleasure. Anju deserves a special mention as a driving force.
I am grateful to my in-laws, DJ, Radha, Sam for their understanding
and Kshitij and Angaj for being a refreshing change from the mono-
tous research life.
This work would not have been possible without Malathi.

Jayendra Prasad
