respondents

6.18 Relationship between Perceived stress and Self-esteem of respondents

6.19 Mean and Standard Deviation of each of 14 item of the Ways of Coping

6.20 Mean and Standard Deviation of each of 14 items of the Ways of Coping of both genders

6.21 Mean and Standard Deviation of Problem focused Coping and Emotion focused coping among respondents

6.22 Level of Problem focused Coping among respondents

6.23 Cross tabulation of Level of Problem focused Coping and gender of respondents

6.24 Level of Emotion focused Coping among respondents

6.25 Cross tabulation of Level of Emotion focused Coping and gender of respondents

6.26 Model fit Indices for CFA for Coping

6.27 Levels of Proactive Coping among respondents

6.28 Cross tabulation of Levels of Proactive Coping and sex of the respondents

6.29 Model fit Indices for CFA of Proactive Coping

6.30 Regression coefficients of the various dimensions of Proactive Coping in the Structural Equation Model of Proactive Coping

6.31 Correlation between Proactive Coping and its dimensions

6.32 Comparison of Means and Standard Deviations and z value of Academic stress with respect to the gender of the respondents

6.33 Comparison of Means and Standard Deviations and f value of Academic stress with respect to the age of the respondents

6.34 Comparison of Means and Standard Deviations and f value of Academic stress with respect to the type of school of the respondents

6.35 Comparison of Means and Standard Deviations and z value of Academic stress with respect to the course of study of the respondents

6.36 Means and Standard Deviations and f value of Academic stress with respect to the stream of study of the respondents
6.37 Comparison of Means and Standard Deviations and $f$ value of the variables of Academic stress with respect to the religion of the respondents

6.38 Comparison of Means and Standard Deviations and $z$ value of Academic stress with respect to the type of family of the respondents

6.39 Comparison of Means and Standard Deviations and $f$ value of Academic stress with respect to the ordinal position of the respondents

6.40 Comparison of Means and Standard Deviations and $f$ value of Academic stress with respect to the educational qualification of father of the respondents

6.41 Comparison of Means and Standard Deviations and $f$ value of Academic stress with respect to the educational qualification of mother of the respondents

6.42 Comparison of Means and Standard Deviations and $f$ value of Academic stress with respect to the occupation of father of the respondents

6.43 Comparison of Means and Standard Deviations and $f$ value of Academic stress with respect to the occupation of mother of the respondents

6.44 Comparison of Means and Standard Deviations and $z$ value of Perceived stress with respect to the financial category of the respondents

6.45 Comparison of Means and Standard Deviations and $z$ value of Perceived stress with respect to the gender of the respondents

6.46 Comparison of Means and Standard Deviations and $f$ value of Perceived stress with respect to the age of the respondents

6.47 Comparison of Means and Standard Deviations and $f$ value of Perceived stress with respect to the type of school of the respondents

6.48 Comparison of Means and Standard Deviations and $f$ value of Perceived stress with respect to the course of study of the respondents

6.49 Comparison of Means and Standard Deviations and $f$ value of Perceived stress with respect to the stream of study of the respondents
6.50 Comparison of Means and Standard Deviations and f value of Perceived stress with respect to the religion of the respondents

6.51 Comparison of Means and Standard Deviations and f value of Perceived stress with respect to the type of family of the respondents

6.52 Comparison of Means and Standard Deviations and f value of Perceived stress with respect to the ordinal position of the respondents

6.53 Comparison of Means and Standard Deviations and f value of Perceived stress with respect to the educational qualification of father of the respondents

6.54 Comparison of Means and Standard Deviations of Perceived stress with respect to the educational qualification of mother of the respondents

6.55 Comparison of Means and Standard Deviations and f value of Perceived stress with respect to the occupation of father of the respondents

6.56 Comparison of Means and Standard Deviations and f value of Perceived stress with respect to the occupation of mother of the respondents

6.57 Comparison of Means and Standard Deviations and z value of Perceived stress with respect to the financial category of the respondents

6.58 Comparison of Means and Standard Deviations and z value of Proactive Coping with respect to gender of the respondents

6.59 Comparison of Means and Standard Deviations and f value of Proactive Coping with respect to age of the respondents

6.60 Comparison of Means and Standard Deviations and f value for Perceived stress with respect to the type of school of the respondents

6.61 Comparison of Means and Standard Deviations and z value of Proactive Coping with respect to course of study of the respondents

6.62 Comparison of Means and Standard Deviations and f value of Proactive Coping with respect to stream of study of the respondents
6.63 Comparison of Means and Standard Deviations and f value for variables of Proactive Coping with respect to the religion of the respondents

6.64 Comparison of Means and Standard Deviations and z value of Proactive Coping with respect to type of family of the respondents

6.65 Comparison of Means and Standard Deviations and f value for variables of Proactive Coping with respect to the ordinal position of the respondents

6.66 Comparison of Means and Standard Deviations and f value of Proactive Coping with respect to educational qualification of father of the respondents

6.67 Comparison of Means and Standard Deviations and f value of Proactive Coping with respect to the occupation of father of the respondents

6.68 Comparison of Means and Standard Deviations and f value of Proactive Coping with respect to the educational qualification of mother of the respondents

6.69 Comparison of Means and Standard Deviations and f value of Proactive Coping with respect to the occupation of mother of the respondents

6.70 Comparison of Means and Standard Deviations and f value of Proactive Coping with respect to financial category of the respondents

6.71 Comparison of Means and Standard Deviations and z value of use of Humour as a Way of Coping with respect to gender of the respondents

6.72 Comparison of Means and Standard Deviations and z value of use of Religion as a Way of Coping with respect to gender of the respondents

6.73 Mean, Standard Deviation, Mean Percentage Score and z value for Perceived stress

6.74 Comparison of Means and Standard Deviations and f value of Academic stress with respect to the type of school of the respondents

6.75 Correlation between Perceived stress and Self-esteem of adolescent students

6.76 Comparison of Means and Standard Deviations and z value of
the variable of Problem-focused coping based on the gender of the respondents

6.77 Comparison of Means and Standard Deviations and z value of Emotion-focused coping based on the gender of the respondents

7.1 Intra personal Stressors –Comparison of data from quantitative and qualitative study

7.2 Dimensions of Problem-focused Coping and Emotion-focused Coping - Comparison of quantitative and qualitative study
