ACKNOWLEDGEMENTS

I am greatly obliged to my previous guide Dr. G.S. Mitalik, Director of Man Power and Health (W.H.O.), New Delhi, who introduced me to the field of Medical Genetics.

My sincere thanks to my present guide Dr. G.S. Sainani, Ex-Professor and Head of the Department of Medicine, B. J. Medical College, Poona, who took keen interest in my work and persuaded me to complete this work.

Dr. (Mrs.) M. A. Phadke, Professor and Head of the Department of Paediatrics, B. J. Medical College, Poona, have given me continuous encouragement, guidelines for conducting various population genetic survey and valuable suggestions while writing the thesis. I do not think I would have been able to complete this work without her encouragement.

I am very much thankful to the Dean, B. J. Medical College and Sassoon General Hospitals, Poona, for extending all facilities for laboratory work.

My sincere thanks to my friends - Shri. Mokashi, Mrs. Khedkar, Shri. Ghathe, Shri. Chaunde, Shri. Kutte and Aij Sheikh - who helped me in preparing this thesis.

It is my duty to thank my subjects, particularly tribal population groups who welcomed me in tribal areas and gave full co-operation for collecting blood samples and other data.

Lastly, I feel very happy to mention here that my wife and all my family members encouraged me to complete this work.
