CONTENTS

RECEPTOR MEDIATED DRUG DESIGN IN BREAST AND COLON CANCER

CHAPTER I: 1 - 48
1.1 General
1.2 Types of Cancer
1.3 Process of Carcinogenesis
1.4 Progress in Anticancer Drug Development
1.5 Chemical approaches to Cancer Therapy
1.6 Biological approaches for Cancer therapy
1.7 Nature and scope of present Dissertation.
   References

CHAPTER II: Experimental Aspects 49 - 57
2.1 Compositional studies
2.2 Infrared Spectroscopy
2.3 Electronic Spectroscopy
2.4 Electrochemical studies
2.5 Electron Spin Resonance Spectroscopy
2.6 Magnetic Susceptibility Measurement
2.7 Biological Studies
   References

CHAPTER III: Copper(II), Nickel(II) AND Platinum(II) CONJUGATES OF PROGESTERONE THIOSEMICARBAZONE: SYNTHESIS, SPECTROSCOPY, MAGNETISM, EPR, CYCLIC VOLTAMMETRY AND ANTIPROLIFERATIVE ACTIVITY AGAINST HORMONE DEPENDENT AND INDEPENDENT CANCER CELL LINES 58 - 106
3.1 Introduction
3.2 Historical account
3.3 Hormone receptors
3.4 Breast cancer drug development
3.5 Chemotherapeutic agents for Breast cancer
3.6 Nature and scope of present investigation
3.7 Experimental Aspects
CHAPTER IV: PROGESTERONE SCHIFF BASE CONJUGATES WITH HYDROXYNAPHTHOQUINONE: SYNTHESIS, SPECTROSCOPY, MAGNETISM, EPR, CYCLIC VOLTAMMETRY AND ANTIPROLIFERATIVE ACTIVITY AGAINST B16F10 MELANOMA CELLS

4.1 Introduction
4.2 Nature of Disease
4.3 Therapy for Melanoma
4.4 Nature and scope of present work
4.5 Experimental
4.6 Results and Discussion
4.7 Antiproliferative activity against B16F10 melanoma cells
4.8 Conclusion
References

CHAPTER V: COPPER COMPLEXES KETOPROFEN HYDRAZONES: SYNTHESIS, SPECTROSCOPY, MAGNETISM, EPR, CYCLIC VOLTAMMETRY AND ANTIPROLIFERATIVE ACTIVITY AGAINST COLON CANCER CELL LINES

5.1 Introduction
5.2 Nature of disease
5.3 Risk factors
5.4 Treatment of Colon cancer
5.5 Role of Cyclooxygenase enzymes in colon cancer
5.6 Role of NSAIDs in colon cancer
5.7 Nature and scope of present investigation
5.8 Experimental
5.9 Results and Discussion
5.10 Antiproliferative activity
5.11 Conclusion
References
