LIST OF TABLES

Table 2.1 Comparison of the chemical composition of the Precambrian and the post-Precambrian iron-formations (Lepp and Goldich, 1964).

Table 2.2 Average chemical composition of different sedimentary facies of iron formations (James, 1966; Eichler, 1968, 1970).

Table 2.3 Mean chemical composition of the Algoma and the Superior type iron-formation for different facies (Gibbs, 1986).

Table 2.4 Mean Trace Element composition in ppm of the Algoma and the Superior type iron-formations for their dominant facies (Gross, 1980, 1986).

Table 3.1 Wet chemical - Instrumental Analytical Scheme

Table 3.2 Major oxide compositions (Wt%) and trace element compositions (ppm) of the surface and drill core samples studied.

Table 3.3 Major oxide compositions (wt%) and trace element compositions (ppm) of few rock standards analysed against their recommended values.
Table 3.4 Trace element compositions (ppm) of few selected samples representing the Kolar iron-formation analysed by Instrumental Neutron Activation Analysis.

Table 3.5 Rare earth element compositions (ppm) of some selected samples representing the Kolar iron-formation analysed by Radiochemical Neutron Activation Analysis.

Table 3.6 Rare earth element and few trace element composition (ppm) of some selected rock standards analysed by the Neutron Activation Analysis (NAA) against their reported values.

Table 3.7 Half life periods, nature of radiations and gamma energy values of few elements and channels used to calculate their energy radiations.

Table 4.1 Range and average chemical compositions, major oxides in percentage and trace elements in ppm, of the surface samples.

Table 4.2 Range and average compositions major oxides in percentage and trace elements in ppm, of the drill core samples of the central KGF and the Mallappakonda.
Table 4.3  Average chemical compositions major oxides in percentage and trace elements in ppm of different types of the drill core samples.

Table 4.4  Solubility product values of some inorganic compounds.

Table 4.5  Average abundances of elements in the earth crust, in three common rocks, and in sea water in ppm (oxides values calculated from element abundance are in percentage).

Table 4.6  Average concentrations of rare earth elements (REE) (in parts per million) in different rock types.
