Acknowledgements

I take the privilege to express my sincere and profound gratitude to my esteemed Sir, Dr. Anand K Bachhawat for his inspiring guidance, immense involvement, zealous interest, constructive criticism and thought provoking discussions without which this endeavor would not have been accomplished. He has instilled in me the confidence to independently think and tackle the many challenges, which come up the scientific career. Through my tenure of 5 years, I have seen in him a very vibrant, yet mature and understanding fatherly figure. I have thoroughly enjoyed my association with him as a student and would cherish these memories for the years to come.

I am thankful to Dr. Amit Ghosh, the director of this institute, for providing me the opportunity to work in this Institute, which has all the modern research facilities.

I am grateful to Dr. K Ganesan for his invaluable suggestions and time-to-time help. I also thank Dr. Jagmohan Singh, Dr Alok Mondal for their scientific advice and cooperation, which helped me a lot during this study. A very special thanks is due to respected Nandita madam for her keen interest in my work and for her useful suggestions.

I also thank Prof. Asit K Chakraborty for offering the expertise and facility to carry out the LC-MS and HPLC experiments. I acknowledge our French collaborators Prof. Serge Delrot and Dr. Andree Bourbouloux for their valuable scientific suggestions and helping us with the glutathione transport experiments that were carried out in their laboratory. I also thank Dr. Ganeshyam Swarup, CCMB, for allowing me to use the central Confocal facility at his laboratory.

When it comes to my colleagues, my first and foremost gratitude goes to Vibha Taneja who had not only been a helpful senior but also a very good friend. Vibha and Bhupesh have been extremely close to me so much so that I recognize them as a part of my family now. Presence of one person, which made my stay in Imtech a wonderful experience, was Jaggu, my friend who has always stood by me like a brother. He made me feel jovial all the while and therefore in his company I always felt ‘at home’. I am sure I have developed a friendship with him that will last a lifetime.

Jaspreet’s arrival in the lab brought some very constructive changes. Her presence definitely made the lab atmosphere more vibrant. She has also been a good friend and an excellent company to me. She has helped me out of the way to complete this thesis. My friend circle also had people like Suman and Meghna who offered an unfaltering friendship and did the best possible for me at the time of need.
I feel that I am a blessed soul since I have many other important people in my life too. Rekha has been a very good friend, and has been by my side during the entire Ph. D tenure. I thank her for giving me good company. Ganguly played the role of an affectionate junior, I will miss him wherever I go. My best wishes will always be with him. Other people in the lab who were extremely helpful and who maintained a congenial working environment were Sanjoy, Mannan and Sushma. I thank them for all this. Cricket was most enjoyable with Sanjoy, Saurabh, Manoj and Jaggu’s company. Neha is a good friend too; my sincere thanks are due to her for her unconditional help during the thesis work. Dev sahib’s friendly gesture, his help in the computer related problems are worth the mention and are duly acknowledged. I sincerely thank him for all his help. My thanks are due to Rajeshwari madam and Purva for extending their help to me during this study.

I also thank Niloy, Pragya, Pallavi-B, Sagar ji, Arvind, Audra, Shakeel, Alpana, Vishal, Rohini, Sumit, Sharon, P-Saluja, Dr. Neeraj, Lakshmi, Rachna, Kamlesh for their help during my stay at Imtech. I thank the summer trainees Monika, Kanam and Anshum who worked with me.

I would also like to thank all my other friends, staff of Imtech, and the mess workers for all their support. I gratefully acknowledge the access to the library and computer facilities at the BIC. I also acknowledge the financial support provided by CSIR during the tenure of my Ph. D. I acknowledge Rajkumarji for providing us with the best technical hand.

I would not have achieved my goals without the support of my family. I dedicate my thesis to my Appa and Amma. Without their blessings this work would not have materialized. They have stood by me throughout my studies and have pampered me with their love, affection and care. Sunder Anna’s support is invaluable. He always understands my problems and has helped me with his suggestions and gestures in different ways. I run short of words to thank Pallavi for all she has done for me throughout these studies and otherwise. She was always encouraging, caring and helpful. Lastly, I would like to thank the almighty for everything in life and I bow to him.
