8.0 BIBLIOGRAPHY

Annual Progress Report (1962-63) Jute Agricultural Research Institute, Barrackpore, West Bengal (India).

Annual Progress Report of the ICAR Scheme on
Distribution of micronutrients in Punjab soils
and their effect on the yield of crops for the
year 1963-66 (Quoted by Kanwar and Randhawa,
1967).

Bingham, F.T., Martin, J.P. and Cistian, J.A. (1968)
Effect of phosphorus fertilization of California
soils on minor element nutrition of citrus.

Bishop, R. F., Jackson, L.P., MacEachern, C.R. and
Macleod, L.B. (1964) Long-term field experiments
with commercial fertilizers and manure, III Ferti­
licity levels, crop yields and nutrient levels in

Biswas, C. R., Sekhon, G.S., Rajinderjit Singh (1977)
Accumulation and Decline of Available Phosphorus
and Potassium in a soil under multiple cropping.

*Bull.* Newyorks. Agric. Exp. Stn. **604**.

Blew, W. K. (1973) Effect of dalapon and the amine salt of 2, 4-D on the nutrient regime of different soil types. 
*Soils Fertil.* Harnenden **25**: 2250.

Soil Sci. 60: 166 - 64.

Dey, S.K. (1971) Changes in soil fertility under continuous cropping and manuring in tea growing areas and probable implications towards fertilizer recommendations.

Effect of graded doses of phosphate on uptake of micronutrients.

Phosphorus changes in Great Plain soils as influenced by cropping and manure application.

(xxiii)

Effects of irrigation and fertilization on 
yields and chemical composition of corn and on the changes in the available K contents of 

Lykov, A.M. (1963) Role of prolonged use of fertilizers, 
a rotation and monocultures in altering the 
organic matter in podzolic soil. Soils Fertil. 

Maclean, A.A. and Doyle, J.J. (1963) The evaluation of 
the residual effect of fertilizer in long term 
43: 229-34.

India Co-ordinated Agronomic Experiments Scheme 
of I.C.A.R. for the year 1972-73, I.A.R.I., 
New Delhi.

Mahapatra, I.C. Goswami, N.N., Raheja, S.K. and 
Annual Workshop of I.C.A.R. Coordinated Scheme 
on Micronutrients in soils held at P.A.U. 
Ludhiana (quoted by Kanwar and Randhawa, 1974).

Bulletin on Highlight of Research of Long Term
Fertilizer Experiments in India (1971-82), I.A.R.I.,
New Delhi.

Neelkantan, V. and Mehta, B.V. (1961) Copper status of
soils of western India. Soil Sci. 91: 251-56.

in the presence and absence of growing plants.

Nowosielska, B. (1966) The effect of different long
term treatments on the Zn content of soil.

Olsen, S.R., Cole, C.V., Watanabe, F.S. and Dean,
in soil by extraction with sodium bicarbonate.

Osipova, Z.M. (1964) Comparative effect of mineral
fertilizers with and without ballast during their
prolonged systematic use on the agrochemical
properties of derno-podzolic soils and the chemical
composition of plants. Soils and Fertil. Harpenden,
31: 2914.

Shukla, U.C. and Bhatia, K.N. (1971) Effect of N level on the Fe and Mn concentration and uptake in hybrid and local varieties of pearl millet. 
Indian J. Agric. Sci. 41 : 790 - 94.

Field experiments on concentrated organic nitrogen fertilizers.

Potasssium and phosphorus zinc relationship.
Crops and Soils, 18 : 11.

Acid-extractable zinc of soils in relation to occurrence of zinc efficiency symptoms of corn.
A method of analysis.

Soil sulphur fractions as chemical indices of available sulphur in some Australian soils.

Effect of fertilizers and farmyard manure on the copper, manganese, molybdenum and zinc removed by arable crops at Rothamsted.

Soil fertility studies, II Manure and fertilizers for potatoes at Charlottetown, P.R.I.
Scient. Agric. 30 : 247 - 55.
Changes in soil physical and chemical properties according to different cropping systems on reclaimed soil.

Yamashita, K. (1967)
Effects of long term application of farmyard manure on the nature of soil organic matter and physical and chemical properties of paddy soils.

Influence of long-time fertility management practices on chemical and physical properties of a Fargo clay soil.

Zurn, P. (1964)
Results of soil analysis in long term trials on grass land.
