

Acknowledgments

I owe a deep debt of gratitude to my teacher, Professor Ajit Kumar Sengupta, Professor, Department of Economics, University of Calcutta. Without his constant guidance, advice and active help at every stage, this work could never have been completed. I am sincerely grateful to him for the help. I also acknowledge with respect the help that I received from my teachers Professor Asis Kumar Banerjee, Professor, Department of Economics, University of Calcutta and Professor Hiron Kumar Banerjee, Professor, Department of Economics, University of Calcutta.

I am also very fortunate in having the benefit of comments from Dr. Pabitra Giri, Reader, Department of Economics, University of Calcutta. My thanks go to Dr. Kamal Kumar Datta, Central Soil Salinity Research Institute, Haryana and Dr. Uttam Kumar Bhattacharyya, Centre for Studies In Social Sciences, Calcutta, for their active help and encouragement.

For providing me the relevant data, I also express my sincere thanks to the staff-members of different organizations in Calcutta: The Jute Manufacturers' Development Council, The Office of Jute Commissioner and The Jute Corporation of India - all Government of India organizations; and The Indian Jute Industries' Research Association and The Indian Jute Mills Association.

Sri Partha Sarathi Sarkar and Sri Sandip Banerjee typed the several drafts of the thesis with much care. I thank them for their enthusiasm and the many helpful editorial comments they have kindly cared to make.

My family-members including my wife and son were eagerly waiting to see my work complete. I hope, they will get relief now. However, it is not possible to compensate their long sufferings.

Finally, it is needless to mention, none other than myself is responsible for the errors and omissions that might remain and for the views, expressed here.
