ACKNOWLEDGEMENT

I take this opportunity to express my deep sense of reverence, gratitude and indebtedness to my Supervisor, Prof.(Dr.) R.C. Sharma, for his unstinted support and scholarly guidance that he extended to me unfailingly throughout the course of this thesis. His in-depth understanding of the problem under study, always helped me to organize my thoughts and presentation systematically. In spite of all odds, he very patiently scrutinized and synthesized my research work throughout the process.

I am extremely fortunate to have Prof. M.L. Sondhi as the Chairman of the Centre, who has been encouraging and helping me at all crucial moments with sympathy and affection. Scientists and concerned project officers of Department of Ocean Development and National Institute of Oceanography, have been of immense support at the initial stages of my understanding and material collection regarding the said subject. Support of J.N.U. Librarian and concerned staffs in the process was noteworthy and applaudable.

During my field-trips to various academic and research institutions of U.S.A., U.K., Norway, Sweden and other West European countries, I had the privilege to be associated with a number of leading scholars, scientists and politicians, specializing on the study of various dimensions on Antarctic problems and prospects.
During my stay there, I had some meaningful and fruitful discussions with some of them. To mention a few, Dr. Olav Orheim, Head, Antarctic Section of Norwegian Polar Research Institute; Willy Ostreng, Director, The Fridtjof Nansen Institute, Norway; Arnfinn Jorgensen--Dahl, Research Fellow on Antarctic Project of the same Institute; Mr. Ove, E. Bring, L.L.D, Legal Advisor to the Swedish Ministry for Foreign Affairs; Mr. Anders Karlqvist, Director of the Swedish Polar Research Secretariat, G.T. Thuronyi, Head, Science and Technology Division, The Library of Congress, Daymand V. Arnaudo, Office of Oceans and Polar Affairs, Department of State, Washington, D.C. 20520; Peter Wilkiniss and Guy, G. Guthridge, Director and Manager respectively of Division of Polar Programme, National Science Foundation, Washington, D.C. 20550. Tim Haushen, Secretary, Polar Research Board, National Academy of Sciences; Dr. Piers Vitebsky, Assistant Director, Scott Polar Research Institute, University of Cambridge; Mr. J.G. Paren, Publicity Officer, BAS, Cambridge. I am extremely thankful to all these individuals for their sincere cooperation and help without which it would have been impossible to understand the research problem in real sense. They also helped in collecting the materials required to enrich this thesis.
I am thankful to my friends, to mention a few, Onkar, Imtiaz, Kapil, Rabindra, Ravi, Anil Kumar, Vijay, Dilip, Ramkumar, Ronki, Yogendra and Anil Kumar Jha for their constant encouragement and help at the crucial juncture of submitting the thesis.

I express my gratitude to the University Grants Commission (U.G.C.) for providing me the much needed financial supports in terms of fellowship. I record my sincere thanks to the Dean and staff members of School of International Studies for their ready help and cooperation.

At this moment of time, I must record my deepest regards and reverence to my parents and family members for their constant emotional support and encouragement. In the absence of this emotional back-up, this work would not have seen the light of the day. I share the same feelings for Mrs. Nasira Sharma, Anil and Anju.

I would be failing in my responsibility, if I do not record my sincere thanks to Mr. S.K. Sarkar, Mr. Gajanan Hegde and Mr. S.K. Jain for their assistance in word processing of the thesis. I also thank Mr. Manas Saikia, Sales Manager India, Publishing Division, Cambridge University Press and the Select Book Service
Syndicate for their timely help in getting the most recent relevant publications.

And finally, I owe all the responsibility for any error or mistake, that has crept into the thesis.
