List of Figures

Figure 2.1. Year-wise Trend of studies ................................................................. 23
Figure 2.2. Continent wise Research Selected for studies ................................. 55
Figure 2.3. Developing Countries trend on studies on Nutritional Status .......... 56
Figure 2.4. Tools used to assess Cognitive development of child ...................... 57
Figure 2.5. Shows the trend based on Sample size ............................................. 58
Figure 2.6. Shows the age of samples exploring Nutritional Status of child .......... 60
Figure 2.7. Trend depicting undernourishment based on gender in Indian Studies .. 61
Figure 2.8. Trend based on Nutritional Awareness of Mother (NAM) and Cognitive development (CD) ................................................................. 62
Figure 4.1. The Normal distribution of Cognitive Development Score of children (CDS) ........................................................................................................ 89
Figure 4.2. The Normal distribution of Nutritional Awareness of Mother (NAM) .... 90
Figure 4.3. The Normality distribution of Socio Economic Status of the Family (SES) ........................................................................................................ 91
Figure 4.4. Observed, predicted 1 (Model without Z_1) & predicted 2 (Model with Z_1) values for multiple regression model including Z_1=1 for Nutritional Status (Weight for Age) ................................................................. 131
Figure 4.5. Observed, predicted 1 (Model without Z_2) & predicted 2 (Model with Z_2) values for multiple regression model including Z_2=1, Nutritional Status (Weight for Age) ................................................................. 133
Figure 4.6.  Observed, predicted1 (model without Z1) & predicted2 (model with Z1) values for multiple regression model including Z 1=1 for case Nutritional Status (Height for Age) .......................................................... 137

Figure 4.7. Observed, predicted1 (model without Z2=1) & predicted2 (model with Z2= 1) values for multiple regression model including Z 2= 1 for case Nutritional Status (Height for Age) .......................................................... 139

Figure 4.8. Observed, predicted1 (model without Z1) & predicted2 (model with Z1) values for multiple regression model including Z 1=1 for case Nutritional Status (Weight for Height) .................................................. 143

Figure 4.9. Observed, predicted1 (model without Z2=1) & predicted2 (model with Z2= 1) values for multiple regression model including Z 2=1 for case Nutritional Status (Weight for Height) .................................................. 144

Figure 4.10. Comparison between Recommended Dietary Allowance (RDA) and energy intake ......................................................................................................................................... 151

Figure 4.11. Comparison between Recommended Dietary Allowance (RDA) and Protein intake ......................................................................................................................................... 152

Figure 4.12. Comparison between Recommended Dietary Allowance (RDA) and fat intake ......................................................................................................................................... 152

Figure 4.13. Comparison between Recommended Dietary Allowance (RDA) and Calcium intake ......................................................................................................................................... 153

Figure 4.14. Comparison between Recommended Dietary Allowance (RDA) and Iron intake ......................................................................................................................................... 153
