Acknowledgement

This study was carried out in the Department of Oncogene Regulation, Chittaranjan National Cancer Institute (CNCI), Kolkata 700026, India, during my tenure from 2008 to 2014 under the supervision of Dr. Chinmay Kumar Panda. I am deeply indebted and obliged for his novel and meticulous guidance, constructive criticism, immense enthusiasm and logical intuitions that was instrumental behind this productive endeavor. His guidance will certainly be directive throughout my scientific carrier, in future.

I also owe my deepest gratitude to The Director, CNCI, Kolkata for providing me the opportunity to work in this esteemed institute, with excellent research facilities.

I convey my humble thankfulness to the women who have participated in this study, even with the deadly diseased condition.

I would also express my sincerest appreciation to CSIR and DBT, Govt. of India for the financial support to carry out this research assignment.

I take this opportunity to extend my gratefulness to all those who have contributed directly or indirectly to this thesis. I am sure the list would be long and my earnest effort would be to convey my heartfelt thanks to all of them, following the time line.

10th April 2008, I officially entered into my Ph.D. life, but the journey originally started few years back from then, when I was an aspiring undergraduate. Under the effective guidance and care of my respected teachers Dr. Prabal Dey and Dr. Samsul Alam, my interest in Biology nurtured and started grooming. Dr. Alam planted the seed of Genetics so well in my brain that I started getting interest in the subject since the age of nineteen. Today, after so many years the seed has started taking shape of a seedling by spreading all its budding branches. Thereafter, in University I had no second thought that I would be learning Cytogenetics and Cancer Biology as a specialization. And that was the turning point of my life because during this time I came across a person who helped me to build my academic career and his contribution cannot be expressed in words. He is my respected teacher, Late Prof. Samar Chakraborty. In spite of his ailing condition he invested his full attention towards my learning. His style of teaching was so simple and so easy to understand and yet so motivating that it helped me to learn this complex subject like Cancer Biology with utmost ease.

During Masters, the event that enhanced my research aspiration on cancer genetics was attending the thought provoking lectures of few renowned scientists during the National Seminar in the University. And how can I fail to express my deepest regards to my friend Deboleena, who informed me about the
opening to work with Chittaranjan National Cancer Institute. This event had certainly changed my life forever.

Thereafter, when I joined CNCI, I found the golden opportunity to peruse my dream. Here I met my supervisor Dr. Chinmay Kumar Panda. From the very beginning I found him extremely open minded, simple and an easy person to go with. Perhaps he read my mind from the beginning and kept on motivating me on every new effort. It is fascinating when he explains the most complex data in a simplified way. This is only because of his vast knowledge and ideas in science. This journey would have been next to impossible without Dr. Panda’s effective guidance which has not only influenced my professional career but has also helped to enrich my experience towards the journey of life.

Alongside, there was another pillar behind my research-life was the renowned Gynecologist Dr. Partha Basu, whose constant encouragement worth mentioning. He introduced me to the pathological perspective of cervical cancer. The day I first went to the cervical screening camp with him, I realized the fact that in spite of the high cervical cancer incidence, our women population is pretty indifferent and helpless about HPV. Dr. Basu’s positive energy and high spirit inspired me a lot. He always raised his helping hand whenever I required any samples for my research.

In this context I must mention a few more names who were always there for help and suggestions, in spite of their hectic schedule; Dr. Ranajit Mondal, Dr. Debjani Chowdhury, Dr. Pradip Das, Dr. Sujata Ash and Mrs. Rakiba Begum from Dept. of Gynecologic Oncology, CNCI. Without their kind support it would have been difficult for me to work with vast sample pools.

My special thanks to all the science faculty members of CNCI for their suggestions, help and cooperation. Especially to Dr. Shyam Sundar Mandal for helping me to overcome the statistical deadlocks during this study; Dr. Sukta Das for her constructive criticism, valuable suggestions and help in structuring of the scientific work; Dr. Sandip Majumder for his immense cooperation as Academic Coordinator; and the members of Central Research Instrumentation Facility (CRIF) for their constant support. I also thank Dr. Susanta Roychoudhury of IICB, for his constant encouragement and advise whenever asked for.

Although our lab, Department of Oncogene Regulation conducts multiple research work, and we have scholars of different domains but our unity among ourselves have always been talked about. I was lucky enough to get senior colleagues like Dr. Dipanjana Mazumder Indra, Dr. Guruprasad Maiti, Dr. Sraboni Mitra, Dr. Nupur Mukherjee. My leanings from them are countless. At the same time I am obliged to have companies of my lab mates like Mr. Arup Kumar Dutta, Ms. Shreya Sarkar, Mr.
Subhayan Sur, Mr. Chandraditya Chakraborty and Mrs. Hemantika Roy Dasgupta. We have not only worked together and discussed lots of research ideas but also spent lighter moments which will be engraved in my memory forever.

I am also grateful to my seniors Dr. Nilanjana Bhattacharya, Dr. Satyabrata Sinha, Dr. Susmita Podder, Dr. Amlan Ghosh, Dr. Sudesna Mukherjee, Dr. Debolina Pal and Dr. Rittwika Bhattacharya, for their constant guidance, support and encouragement. I would not have completed this journey successfully without them. In addition, my sincere thanks to my juniors, Mr. Sudip Samadder, Mr. Saimul Islam, Mr. Anirban Roy Chowdhury, Mr. Atish Barua, Ms. Rituparna Roy and Ms. Sharmistha Ghoshal, for their friendly and helpful co-operation during the tenure of my work. I wish them all the success in life.

Last but not the least, I would like to convey my deepest and sincerest gratitude to my family members, my mother Mrs. Eva Dutta, my father Mr. Samirendra Nath Dutta and my brother Suvodeep for their continuous support, inspiration and encouragement, under any circumstances. Along with them I am thankful to my uncle Mr. Ranendra Nath Dutta and my aunt Mrs. Nibedita Dutt. Their contribution is no less than my parents’. I am grateful to Dipan whose inspiration and encouragement has driven me at the beginning of this journey. Another person, whose contribution cannot be expressed in words, is Sujay, whose association and compassion helped me to overcome many difficult circumstances that came as a hindrance in my way. He is the reason that I have not give in to difficult situations and always fought back and chased my dreams. I feel really lucky and blessed to have all of them in my life.

Finally I would like to conclude with the prayer quoted from the Upanishad:

“AUM saha navavatu, saha nau bhunaktu
Saha veeryam karvaaahai”

which means; ‘Let us together be protected and let us together be nourished by God’s blessings. Let us together join our mental forces in strength for the benefit of humanity.’

Sankhadeep Dutta
