Summary

Chapter 1: General Introduction 1-46

1.1. Overview of Carcinogenesis 2

1.1.1. Stages of Carcinogenesis 3

1.1.2. Agents of Carcinogenesis 7

1.1.3. Tobacco associated carcinogen 10

1.1.3.i. N-nitrosodiethylamine (NDEA) 13

1.1.3.ii. NDEA induced carcinogenicity in experimental animal 13

1.1.3.iii. Cancer studies in human 15

1.1.3.iv. Metabolism and mode of action of NDEA 15

1.1.4. Stem cell and carcinogenesis 17

1.1.4.i. Cancer stem cell markers 21

1.1.4.ii. Stem cell self renewal pathways 23

1.2. Carcinogenesis in multiple organs 29

1.2.1. Multi-organ carcinogenesis in animal model 31

1.2.2. Oral carcinogenesis and self renewal Wnt and Hedgehog pathways 33

1.2.3. Liver carcinogenesis and self renewal Wnt and Hedgehog pathways 35

1.3. Cancer chemoprevention 37

1.3.1. Tea and Tea polyphenols: Epigallocatechin gallate (EGCG) and Theaflavin (TF) associated cancer chemoprevention 40
1.3.1.i. Tea and tea polyphenols in prevention of different carcinogenesis

Chapter 2: Scope of the study

Chapter 3:
Analysis of the mechanism of restriction of multi-organ carcinogenesis in tongue and liver induced by oral administration of NDEA by tea and tea polyphenols EGCG and TF

3.1. Introduction 51
3.2. Objective 53
3.3. Materials and methods 54
3.4. Results 65
3.5. Discussion 110
3.6. Conclusion 116

Chapter 4:
Analysis of the mechanisms of restriction of liver carcinogenesis induced by intra-peritoneal administration of NDEA by the tea polyphenols EGCG and TF

4.1. Introduction 118
4.2. Objective 120
4.3. Materials and methods 121
4.4. Results 129
4.5. Discussion 161
4.6. Conclusion 165

Chapter 5: General Discussion
