1. *Introduction*  

1.1 Eukaryotic cell cycle  

1.2 Cell cycle checkpoints  

1.3 Cell cycle of fission yeast  

1.3.1 G1 phase  

1.3.2 S phase  

1.3.3 G2 phase  

1.3.4 M phase  

1.3.5 Cytokinesis  

1.4 Cell cycle checkpoints in fission yeast  

1.5 Transcriptional regulation of cell cycle  

1.5.1 transcriptional regulation of cell cycle in mammals  

1.5.2 transcriptional regulation of cell cycle in *S. pombe*  

2. *Aims and objectives*  

3. *Materials and methods*  

3.1 Materials  

3.1.1 Chemicals  

3.1.2 Strains and media  

3.1.3 Equipments
3.1.4 Media composition 74
3.1.5 Buffer composition 76

3.2 Methods 78

3.2.1 Preparation of competent bacterial cell for transformation 78
3.2.2 Purification of plasmid DNA from bacterial cultures 79
3.2.3 Fission yeast growth conditions 79
3.2.4 Preparation of genomic DNA from S. pombe 79
3.2.5 S. pombe transformations 80
3.2.6 Viability assays 80
3.2.7 Microscopy 81
3.2.8 Preparation of denatured cell extracts and immuno-blotting 81
3.2.9 Flow Cytometry 82
3.2.10 Quantification of nucleic acids 82
3.2.11 Agarose Gel Electrophoresis 83
3.2.12 DNA fragment purification 83
3.2.13 RNA isolation and Real Time PCR 83
3.2.14 Chromatin Immuno-precipitation 85
3.2.15 Clones used in this study 88

4. Results and Discussions

4.1 Chapter 1 - Role of transcription factor Atf1 in regulation of G2-M entry in fission yeast 92-112

4.1.1 Introduction 93
4.1.2 Atf1 is important for mitotic entry in S. pombe 95
4.1.3 Atf1 targets CDK activity independently of Wee1 in order to regulate G2/M transition in S. pombe

4.1.4 Atf1 over-expression leads to increased Cdc13 expression which is responsible for mitotic acceleration

4.1.5 Atf1 directly binds to cdc13+ promoter and enhances Cdc13 transcription

4.2 Chapter 2 - Investigation of gene expression changes resulting from Atf1 overexpression

4.2.1 Introduction

4.2.2 Array and sample information

4.2.3 Overview of the microarray data analysis

4.2.3.1 Data processing and normalization

4.2.3.2 Hybridization and correlation plot

4.2.3.3 Profile Plot

4.2.3.4 (PCA) Principle Component Analysis Plot

4.2.4 Differential gene expression analysis

4.2.4.1 Volcano Plot

4.2.4.2 Cluster analysis

4.2.5 List of differentially expressed genes

4.2.6 Hierarchical clustering

4.2.7 Data analysis

4.2.8 Over-expression of Atf1 accelerates G1/S transition and S phase progression
4.3. Chapter 3 – Role of Pcr1 in regulation of cell cycle in fission yeast

4.3.1 Introduction

4.3.2 Pcr1 over-expression delays the G2/M and G1/S transitions in S. pombe

4.3.3 Pcr1 over-expression leads to repression of the Atf1 dependent cell cycle regulatory genes cdc13⁺

4.3.4 Pcr1 over-expression leads to decreased recruitment of Atf1 to the cdc13⁺ promoter and thereby reduces the levels of Cdc13 in S. pombe cells

5. Conclusion
