Acknowledgements

As I submit my thesis, it gives me a sense of immense pleasure to express my gratitude to all those who have contributed in their special way to make the completion of this thesis possible.

My deepest gratitude goes to my supervisor Dr. Sunil Mukherjee for his constant guidance, encouragement, his ability to solve all complex problems in a simple manner and for allowing me to work freely. His insight into the subject has always made me realize and understand the subject in a broader perspective. All the lunch treats he took us out for, provided an opportunity to get to know better the lighter side of his personality, which made working with him all the more comfortable.

Dr. Nirupam Roy Choudhury deserves special mention for his immense patience in listening to my day-to-day troubles, his amazing sense of humor and for bearing with my "absent-mindedness" for the past four years. His technical advice at various stages of my experiments has always been very helpful.

Many thanks to all members of the "geminivirus group" for making the weekly Saturday meetings so lively, informative and interactive. I was lucky to be a part of such a group.

I would like to thank Prof. V. S. Chauhan, Director, ICGEB, who gave me the opportunity to work at ICGEB. His support at various stages in these past four years is duly acknowledged.

I am thankful to Profs. S.C Maheshwari, Nirmala Maheshwari and Drs. Sudhir Sopory, Narendra Tuteja, M. K. Reddy, Raj Bhatnagar, V.S. Reddy, Suresh Nair for their valuable suggestions and support at all times. I also acknowledge gratefully the help and advice provided by Drs. Bhavna Waie, Snehlata, Neeti, Pradeep and Sudesh.

I am grateful to Dr. Shahid Jameel and Ms. Charu Tanwar for providing the confocal facility.

Seniors like Drs. Yashwanti, Gayatri, B. N. Singh, Mintu, Amit, Bhavna, Shweta and Neema made learning easier. Their unconditional support and help made working a pleasure.
I am thankful to my juniors and all members of the plant molecular biology group, including Chandan, Surender and Ramesh for their cheerful support during the four years of my stay at ICGEB. All the members of the plant floor are also acknowledged for providing a congenial and friendly environment to work.

The financial help provided by CSIR for pursuing my thesis is duly acknowledged.

Gratitude is expressed to Dr. Nilanjan Roy Choudhury, Dr. Pratima Sinha and Justin Donato for their kind gifts of plasmids and yeast strains and to Dr. Savithri for the ICMV-CP antibodies.

My batchmates-Punjab, Dasaradhi, Wricha, Sidharth, Suman, Kannan and Chamari deserve special mention for their relentless help, vital moral boosting and for always "being there" whenever I needed them. I shall always cherish the good times we had together. Special thanks are due to Anuja, Atish, Ajay, Basu, Vikash and Smita for their help and for all those light and cheerful moments that I shared with them.

I owe a lot to Preeti and Arun for always listening to me and for being the best of friends. Friendship transcends distances and I am lucky to have friends like Ruchi, Vanaja and Nivedita who though far away have always stood by me in all odds.

Finally, but not the least, I would like to thank all the members of my family for supporting me all these years. My parents and my brothers are the ones who have made this thesis a reality by having faith in me and for instilling in me the courage to strive and achieve higher goals in life. I cannot forget the contribution of my bhabhis- Seema echi and Jisha echi and my niece Aparna who have been a constant reservoir of cheer at all those times when I needed it most.

Vineetha
