

ACKNOWLEDGEMENTS

I express my deep sense of gratitude to Dr. S.C. Mukhopadhyay, M.Sc., Ph.D., D.Sc., Professor and Head of the Department of Geography, Calcutta University for his counsel, guidance and constant supervision to complete the present research work. I am indebted to my former teachers Sri K.N. Mukherjee and Sri B.K. Banerjee who helped me to explore new concepts and made suggestions for inclusion in the thesis. My debt is also to Dr. B. Bhattacharyya, Professor and Dean, Faculty of Agriculture and Veterinary Sciences, Calcutta University for his advice and encouragement throughout the work. I also express my heart felt thanks to Sri R.K. Roy, Director, Geological Survey of India, Eastern Region, and Dr. B.S. Sasmal, Central Research Institute for Jute and Allied Fibres (ICAR), Barrackpore. Shri Roy accompanied me on my second field trip, helped much in preparation of the geological map of the Quaternary Formations and held fruitful discussions on the environmental geology of the area. Dr. Sasmal rendered much help to me in statistical analysis through computer and gave valuable suggestions.

I also express my thanks to Shri A.L. Das and Smt. Aruna Goswami, National Bureau of Soil Survey and Land use Planning, Eastern Region, Calcutta and Shri B. Biswas, Director, Regional Meteorological Centre, Alipore, for co-operations in the collection of data and related information on Soil and Climate respectively. Dr.P.K. Sirkar, Emeritus Professor of Geography, New York State University, USA also helped much on climate and soil of the area under study. I am also grateful to all the institutions and organisations like Bureau of Statistics and Applied Economics, Sub-divisional Agricultural Office, Bishnupur, Principal Agricultural Office, Bankura, Department of Public Health Engineering, Geological Survey of India, Central Ground Water Board, Centre for Studies in Social Sciences, Calcutta, Institute of Landscape Ecology and Ekistics, Sri Chaityanna Research Institute, Minor Irrigation Department, Centre for Regional, Ecological and Science Studies in Development of Alternatives, Calcutta, Department of

Geography, Calcutta University and National Library, Calcutta, National Atlas and Thematic Mapping Organisation, Govt. of India.

I would like to record my thanks to all known and unknown villagers of the Sali Basin for their active co-operation particularly in the study of village-wise land use pattern during field investigations. I wish to thank my colleagues in the Department of Geography, Asutosh College, without whose support this research work could not have materialized. I also wish to thank my friend Dr. Saumitra Sen who has patiently and imaginatively drawn some of the diagrams and Dr. Satyam Kumar Kundu who resolutely typed the text. To these, and to many others, I tender my thanks to my wife for her continued forbearance.
