

List of tables

Review of the literatures

Table I: Fungal infections included in the 1993 AIDS surveillance case definition.

Table II: Species commonly causing Candidiasis and its frequency.

Table III: The most commonly forms of Candidiasis.

Table IV: Changes in the positions of top ten courtiers for estimated number of adults (in million) with diabetes in 1995 and 2025.

Table V: Reports of vulvovaginal candidiasis from Indian patients over the year (1961-2005).

Table VI: Antifungals and their mode of action.

Table VII: Antifungals and year in which released for treatment of fungal infections.

Table VIII: Lists of those factors, which contribute to the resistance.

Table IX: Molecular methods for epidemiologic fungal strains typing.

Table X: Available species specific probes for various fungal pathogens.

Materials and Methods

Table XI: MIC Breakpoints for various drugs used.

Table XII: List of the standard strains used as controls in this study obtained from American Type Clinical Collection (ATCC).

Table XIII: The random oligonucleotides designed and used in this study.

Results

Table 1: The pattern of the fermentation test results of the different *Candida* species.

Table 2: The pattern of the fermentation test results of the different *Candida* species.

Table 3: The details of the HIV/AIDS patients with oropharyngeal candidiasis.

Table 4: The details of the 25 HIV/AIDS patients with out oropharyngeal candidiasis.

Table 5: Severity of the OPC clinical lesions versus CD4+ T-cells counts.

Table 6: The details of the *Candida* species isolated from diabetic patients with vulvovaginal candidiasis. Clinical samples were vaginal swabs.

TABLE 7: Drug resistance profile of the *C. albicans* resistant isolates isolated from HIV/AIDS and diabetic patients.

Table 8: The enzymes activities in pathogenic strains of *C. albicans* and control.

Table 9: The glyoxylate cycle enzyme activities of the drug susceptible and drug resistant *C. albicans* strains isolated from three different groups of patients.
