CONTENTS

> Chapter - 0: Introduction. 6-12

> Chapter - 1: Normal human femur and mathematical examination. 13-20

> Chapter - 2: Structure of bone lamellae and distribution of forces on the hip-joint. 21-34

> Chapter - 3: Structure of femoral condyles distributing weight to the lower part of the leg. 35-45

> Chapter - 4: Geometry of knee-joint in flexion and extension – lines of forces acting there upon. 46-56

> Chapter - 5: Mathematical role of ligaments and cartilages in the movements of femur and hip. 57-84

> Chapter - 6: Geometrical expression on mechanical role of cruciate ligaments in flexion and extension. 85-91

> Chapter - 7: Analysis of efficiency of patella in the light of patellectomy. 92-109

> Bibliography : 110-112

> Index 113-115

> List of Publications : 116-117

> Xerox of published papers & 1st page of the book. 118-184
ANATOMICAL CONFIGURATION OF HUMAN FEMUR & KNEE-JOINT

Human femur:
(a) Front-View (left)
(b) Back-View (right)
(c) Head of femur (middle-top)
(d) Femoral condyle (middle-bottom)

Human knee
(a) Extension (left)
(b) Flexion (right)
