## Abstract

### List of figures

### List of tables

### Abbreviations & notations

### Index to locations

### Part I: INTRODUCTION

- **1. Scope & purpose of work**
  - 1.1 Lines of approach
  - 1.2 Presentation
  - 1.3 History of investigation
  - 1.4 Acknowledgements

- **2. Regional geologic set-up**
  - 2.1 Previous literature
  - 2.2 Regional Geology
  - 2.3 Recent work
  - 2.4 The area investigated

- **3. Geographic set-up**
  - 3.1 Extent & location
  - 3.2 Accessibility
  - 3.3 Climate, physiography, drainage, soil, vegetation & rock exposures

### Part II: DESCRIPTIONS

- **4. Petrography**
  - 4.1 Psammitic-pelitic metasediments
  - 4.2 Calc-silicate metasediments
  - 4.3 Marbles
  - 4.4 Metabasites
  - 4.5 Metaultramafites
  - 4.6 Granites
  - 4.7 Pegmatites
5 Structural Geometry

5.1 The lithologic map

5.2 Heteroscopic analysis

5.2.1 Description of fabric elements

- Planar elements:
  - S1 74, S2 76, S3 78, S4 78,
  - S5 78, Others 79;

- Linear elements:
  - Mineral lineations 79,
  - Mesoscopie fold axes & pucers 80,
  - Intersections of planar elements 80,
  - Boudinage & pinch & swell structures 80;

- Folds:
  - Fold interference 86, F1 103, F2 111,
  - F3 115, F4 130, Unclassified 135;

- Joints:
  - Homogeneity & symmetry of mesoscopic domains 150

5.3 Macroscopic analysis

5.3.1 Fabric elements in the macroscopic scale

5.3.2 Statistical analysis of fabric elements

5.4 Micro-textural analysis

Part III

6 Interpretations

6.1 Nature & origin of the folds

6.2 Mutual relations of fabric elements in space

6.3 Mutual relations of fabric elements in time

6.4 Metamorphism

6.5 Igneous activity

6.6 Time relations between deformation, metamorphism & igneous activity
