<u>PREFACE</u>	i-ii
<u>ABSTRACT</u>	iii-v
<u>CONTENTS</u>	v-xxv
<u>P A R T - I</u> <u>INDIAN AGRICULTURE AND ITS PROBLEMS:</u> <u>THE STATE OF THE ART FROM THE VIEW</u> <u>POINT OF ERGONOMICS.</u>	1-17
1.            Introduction	2
2.            Indian Agricultural Status	2
2.1.        Annual Agricultural Production	2
2.1.1.     Paddy Production	2
2.1.2.     Tea Plantation	4
2.2.        Irrigation and Other Water Resources	7
2.3.        Consumption of Plant Nutrients	11
2.4.        Tools and Implements Used	11
2.5.        Energy and Power	11
2.6.        Poverty amongst Agricultural Workers	12
2.7.        Future Improvements and Mechanisation	12
2.8.        Man-Machine-Environment Relationship	13
3.            Principles in Ergonomics in Relation to the Development of Indian Agriculture	13
3.1.        Ergonomic Principles	13
3.2.        Scope of Ergonomics in Indian Agriculture	14
4.            Outlines of Research Work in Ergonomics In Indian Agriculture.	15
5.            Conclusions	16
6.            Summary	17
<u>P A R T - II</u> <u>SOCIO-ECONOMIC STATUS, NUTRITIONAL</u> <u>CONDITIONS AND OCCUPATIONAL HAZARDS</u> <u>OF AGRICULTURAL WORKERS IN PADDY</u> <u>CULTIVATION AND TEA PLANTATION IN</u> <u>INDIA.</u>	18-64

CHAPTER - 1	<u>Workers Engaged in Paddy Cultivation In India.</u>	19-53
1.	Introduction	20
2.	Aims and Objectives	20
3.	Improvements in Agriculture and its Limitations in Eastern India.	21
3.1	National Production	21
3.2	Mechanisation : Welcome and drawback	21
3.3	Imported technology and present situation of India.	22
3.4	Farmers Population and economic background to support mechanisation.	22
3.5	Improvisation of existing implements and methods.	23
3.6	Use of appropriate technology.	24
3.7	Role of Ergonomics	24
4.	Materials and Methods	25
4.1.	Employment of workers in agricultural (paddy) fields.	25
4.2.	Wage and economic status of agricultural workers.	25
4.3.	Man-days of work in seasonal paddy cultivation.	26
4.4.	Income of workers during seasonal paddy cultivation.	26
4.5.	Daily activities of village agricultural workers during the season of paddy cultivation.	26
4.6.	Source of income other than paddy cultivation.	26
4.7.	Size of the common village agricultural families.	27
4.8.	Educational status of the common village agriculturists.	27
4.9.	Nutritional status of agricultural workers.	27
4.10.	Occupational hazards during paddy cultivation and information from medical practioners.	27
4.11	Opinion survey on methods to be used to improve the Indian agricultural and their limitations in rural Eastern India.	28

5.	Results and Discussions	29
5.1.	Employment in agricultural field	29
5.2.	Wage and economic status of agricultural workers.	29
5.3.	Landed property and need for betterment.	30
5.4.	Man-days worked in seasonal paddy cultivation.	31
5.5.	Income of workers during seasonal paddy cultivation.	33
5.6.	Income and maintenance of family.	33
5.7.	Source of income other than paddy cultivation.	33
5.8.	Financial support for cultivation	36
5.9.	Daily activities of village agricultural workers during the season of paddy cultivation.	36
5.10.	Size of the common village agricultural workers' families.	38
5.11.	Nutritional status of agricultural workers.	40
5.12.	Wage and nutrition	42
5.13.	Educational status of the common agriculturists.	42
5.14	Education for improvement of agriculture.	43
5.15	Occupational hazards during paddy cultivation.	44
5.15.1	Accidental injuries	44
5.15.2	Corn marks, infection and inflammations	44
5.15.3	Hazards from pesticides and manure ,	44
5.15.4	Environmental Hazards	45
5.15.5	Bad posture and malnutrition	45
5.15.6	A case	45
5.15.7	Improper medical help	46
5.16.	Opinion survey regarding improved ways to be used in the Indian agriculture and their limitations in rural Eastern India.	46
5.17	Scope of mechanisation in relation to village economy.	47
5.18.	Field to Lab. and Lab. to field	49
5.19.	Ergonomics and improvement of Indian agriculture.	49
6.	Recommendations and Conclusions.	50
7.	Summary	52

CHAPTER - II	<u>Ergonomics study on workers engaged in Tea-Leaf Plucking operation in India.</u>	54-64
1.	Introduction	55
2.	Literature Review	55
3.	Aims and Objectives	55
4.	Materials and Methods	56
5.	Results and Discussions	57
5.1	Physical fitness	57
5.2.	Social Life	57
5.3.	Nutritional Status	57
5.4.	Working season and working hours	59
5.5.	Employment	59
5.6.	Education	60
5.7.	Family size	60
5.8.	Occupational hazards	60
5.8.1.	Fitness	60
5.8.2.	Agricultural chemicals	61
5.8.3.	Tannin deposition on skin	61
5.8.4.	Parasitic infections	61
5.8.5.	Injuries	61
5.8.6.	Other hazards	61
6.	Conclusions	63
7.	Summary	64

P A R T - III ERGONOMIC EVALUATION OF EXISTING WORK METHODS AND WORK LOADS IN DIFFERENT TASKS IN PADDY CULTIVATION AND TEA PLANTATION IN INDIA.

CHAPTER-1.	<u>Ergonomic evaluation of work methods and work load in Paddy cultivation.</u>	65-161
1.	Introduction	67
2.	Literature Review	67
3.	Aims and Objectives	70
4.	Materials and Methods	70
4.1.	Work Study	71
4.2.	Work space	71

4.3.	Subjects	71
4.4.	Physical characteristics of the workers	71
4.5.	Physiological responses of the workers	72
4.6.	Postural considerations	73
4.7.	Environmental measurements	73
4.8.	Photography	73
5.	Results and Discussions	75
5.1.	Physical characteristics of the volunteers studied in the present investigation.	75
5.1.1.	Comparison of paddy cultivation workers with tea-leaf pluckers.	75
5.2.	Different agricultural tasks involved in paddy cultivation.	75
5.2.1.	Ploughing : The land preperation task	75
5.2.1.a.	Job description and work study	75
5.2.1.b.	Physiological responses	81
5.2.2.	Levelling of ploughed field	85
5.2.2.a.	Job description	85
5.2.2.b.	Physiological responses	85
5.2.3.	Seed sowing	85
5.2.3.a.	Job description and work study	85
5.2.3.b.	Physiological responses	86
5.2.4.	Drawing out of seedlings from seed bed	87
5.2.4.a.	Job description and work study	87
5.2.4.b.	Physiological responses	92
5.2.5.	Transplantation	93
5.2.5.a.	Job description and work study	93
5.2.5.b.	Physiological responses	97
5.2.6.	Weeding etc. inter cultivation	98
5.2.6.1.	Weeding	98
5.2.6.1a	Job description and work study	98
5.2.6.1b	Physiological responses	98
5.2.6.2.	Pesticiding	99
5.2.6.2.a	Job description and Work Study	99
5.2.6.3	Mannuring	99
5.2.6.3 a	Job description and work study	99

x

✓

5.2.6.3.b.	Physiological Responses	99
5.2.7	Irrigation	99
5.2.8	Bending of steep paddy sticks by the help of a piece of bamboo to make it easy reap.	101
5.2.8.a.	Job description and work study	101
5.2.9	Reaping	101
5.2.9.a.	Job description and work study	106
5.2.9.b.	Physiological responses	107
5.2.10	Sheafing tasks	107
5.2.10.a.	Job description and work study	107
5.2.10.b.	Physiological responses	108
5.2.11.	Paddy carrying task from field to farm	108
5.2.11.a.	Job description and work study	108
5.2.11.b.	Physiological responses	110
5.2.12.	Threshing	110
5.2.12.a.	Job description and work study	112
5.2.12.b.	Physiological responses	112
5.2.13.	Cleaning and storage of threshed paddy	112
5.2.13.a.	Job description and work study	112
5.3.	Environmental condition throughout the paddy cultivation season	113
6.	Conclusions	113
7.	Recommendations and Suggestions from the Present Study and for Future (in depth) Studies	117
7.1.	Studies on large number of workers	117
7.2.	Studies on maximal physical work capacity	117
7.3.	Electromyographic studies	117
7.4.	Energy utilisation studies	117
7.5.	New method of seed sowing	118
7.6.	Transplantation in rows	118
7.7.	Rationalisation of work - rest cycle	118
7.8.	Rest-pause and boundary of the field	118
7.9.	New sitting method in the wet field	118
7.10.	Hand and face protection during application of fertiliser.	118
7.11.	Design of 'Desi' plough - 'Langal'	120

7.12.	Design of Clodcrusher	120
7.13.	Palm guards	120
7.14.	Sickle design	120
7.15.	Paddy bushes collecting palm device during reaping.	120
7.16.	Threshing platform	121
7.17.	Design of clothing and farm implements	121
7.18.	Prevention of thermal load	121
7.19.	Low cost body protection from sun & rain	121
7.20.	Supply of nutritious drinking water	121
7.21.	Estimation of dust and protection from it	121
7.22.	Entertainment in the field	121
7.23.	Use of repellent cream	122
7.24.	Use of leg coverings	122
7.25.	Work in night.	122

CHAPTER - II Ergonomic Evaluation of work methods and work loads in tea-leaf plucking operation.

123-161

1.	Introduction	124
2.	Literature Review	124
3.	Aims and Objectives	124
4.	Materials and Methods	125
4.1.	Description of site	125
4.2.	Selection of subjects	125
4.3.	Anthropometry	126
4.4.	Tea bush dimensions	126
4.5.	Job description	126
4.6.	Work space	126
4.7.	Work studies	128
4.8.	Physiological responses	128
4.8.1.	Observations of the physiological responses.	128
4.8.2.	Conditions of recording physiological responses.	130
4.9.	Psycho-physiological responses	130
4.10.	Environmental conditions	130

4.10.1	Thermal environment	131
4.10.2.	Illumination level	131
4.11.	Use of 'Jhapi' as a protective equipment	131
5.	Results and Discussions	131
5.1.	Anthropometry	131
5.1.1.	Female pluckers	131
5.1.2.	Comparison with the males engaged in the same field.	134
5.1.3.	Comparison with paddy cultivators	134
5.1.3.1.	Females	134
5.1.3.2.	Males	135
5.2.	Tea bush dimensions	135
5.3.	Plucking operations and dimensions of bushes and workers.	135
5.3.1.	Posture and bush dimensions	135
5.3.2.	Work space	137
5.4.	Job description	137
5.5.	Work study	139
5.5.1.	Average number of shoots $\text{min}^{-1}$ .	140
5.5.2.	Hand movement and plucked shoot ratio.	140
5.6.	Physiological responses	140
5.6.1.	Heart rate responses	140
5.6.1.1.	During working	142
5.6.1.2.	During walking	142
5.6.1.3.	Comparison with male workers	142
5.6.2.	Oral temperature	142
5.6.2.1.	During working	142
5.6.2.2.	During walking	143
5.6.2.3.	Comparison with male workers	143
5.6.3.	Comparison (heart rate and oral temperature) with the workers engaged in paddy cultivation.	143
5.6.4.	Sweat loss	144
5.7.	Energy expenditure	144
5.7.1.	Gross energy expenditure	144
5.7.2.	Energy expenditure per shoot	144
5.7.3.	Classification of work load	144

5.8.	Psycho-physiological responses, onset of fatigue and efficiency.	146
5.9.	Environmental conditions in the work place.	146
5.9.1.	Illumination	146
5.9.1.a.	Illumination level at garden, open sky.	147
5.9.1.b.	Illumination under shade trees of garden	148
5.9.1.c.	Illumination at ditches	148
5.9.2.	Thermal environment	148
5.10.	Effect of use of 'Jhapi' to reduce the thermal load.	151
5.10.1.	Disadvantages of wearing the existing 'Jhapi'.	153
5.10.2.	Inferences on the use of 'Jhapi'.	153
6.	Recommendations from the present study	153
6.1.	Selection of workers	153
6.2.	Training of workers	154
6.3.	Selection for training	154
6.4.	Variation in plucking	154
6.5.	Physical fitness of the workers	154
6.6.	Bush dimensions	154
6.7.	Demarcation of trenches	156
6.8.	Supply to help the body cooling system.	157
6.9.	Personal equipment	157
6.9.1.	'Jhapi' - the indigenous hat	157
6.9.2.	'Chupri' - the indigenous basket.	157
6.9.3.	New palm guard	157
6.9.4.	Hand protection during application of fertilizer.	157
6.10.	Reduction of walking	158
7.	Conclusion	158
8.	Recommendations for Future (in depth) Studies.	158
8.1.	Studies on a large number of sample size (workers)	158
8.2.	Studies on energy utilisation.	158
8.3.	Studies on Electromyography	159
8.4.	Studies on maximal physical work capacity.	159

8.5.	Rationalisation of work rest cycle.	159
8.6.	Cut and collect aids and its feasibility	159
8.7.	Environmental comfort and shade trees.	159
8.8.	Use of repellent cream	159
8.9.	Dust and health hazards..	160
8.10.	Monochromatic glass and its effectiveness	160
8.11.	Effect of musical entertainment	160
8.12.	Design of clothing and farm implements	160
8.13.	Analysis of micromotions	160
9.	Summary	161

P A R T - IV A SURVEY OF EXISTING DESIGNS OF IMPLEMENTS  
USED IN AGRICULTURE IN EASTERN PART OF INDIA. 162-186

1.	Introduction	163
2.	Aims and Objectives	164
3.	Materials and Methods	164
4.	Results and Discussions	164
4.1.	Manufacture and manufacturers	164
4.2.	Implements	166
4.2.1.	Land preparation implements	166
4.2.1.1.	Plough	166
4.2.1.2.	A survey of existing design of plough	166
4.2.1.3.	Materials and shape of 'Desi' plough	168
4.2.1.4.	Mould board plough	168
4.2.1.5.	Animal power	168
4.2.1.6.	Yoke for ploughing task	171
4.2.1.7.	Soil leveller	171
4.2.2.	Agricultural earth work implements - spade	172
4.2.3.	Seed sowing implements	173
4.2.4.	Intercultivation implements	173
4.2.4.1.	Bamboo basket	173
4.2.4.2.	Spraying machine	175
4.2.5.	Seedlings drawing out and transplantation implements.	175
4.2.6.	Irrigation implements	175

4.2.7.	Harvesting implements	176
4.2.7.1.	Bamboo piece for bending down the ripe erect paddy sticks	176
4.2.7.2.	Sickles	176
4.2.7.2.1.	Existing design of sickle	177
4.2.8.	Carrying implements	177
4.2.8.1.	Yoke (for use of man)	179
4.2.8.2.	Bullock cart	179
4.2.9.	Threshing implement	
4.2.9.1.	Threshing platform	179
4.2.9.2.	Pedal thresher	180
4.2.10.	Post threshing implements	180
4.2.10.1.	Sweeping mop	180
4.2.10.2.	Winnowing platter	181
4.2.11.	Storage area - granary	181
4.2.12.	Weighing implements - balance	183
4.2.13.	Personal protective equipment	183
4.2.13.1.	Hats	183
4.2.13.2.	Pakhia the large plant made hat	184
4.2.13.3.	Clothing	184
4.2.14.	Some more implements	184
5.	Suggestions and Recommendations	186
6.	Conclusions	186
7.	Summary	186

P A R T - V ERGONOMIC IMPROVEMENT SUGGESTED IN THE FEW SELECTIVE AREAS IN INDIAN AGRICULTURE.

187-265

Introduction	188
1. <u>Ergonomic Evaluation of 'Desi' Plough</u>	193-210
1.1. Introduction	194
1.2. Aims and Objectives	194
1.3. Materials and methods	195
1.3.1. New device supporting experiment	195
1.3.2. Experimental prototype	197
1.4. Results and discussions	197

1.4.1.	Design considerations: Existing and Modified	197
1.4.2.	Physiological responses of the workers engaged in trial.	205
1.4.3.	Suggestions for further improvement	207
1.5.	Conclusions	209
1.6.	Summary	209
2.	<u>An Ergonomic Study on Sickle Design in Indian Agriculture.</u>	211-233
2.1.	Introduction	212
2.2.	Similar works on ergonomics	212
2.3.	Aims and Objectives	213
2.4.	Materials and methods	213
2.4.1.	Physical characteristics of the workers	213
2.4.2.	Job description	213
2.4.3.	Traditional design of sickle	213
2.4.4.	Ergonomically modified design of sickle (trial models)	214
2.4.5.	Work study and productivity	214
2.4.6.	Opinion survey by the questionnaire technique	214
2.4.7.	Physiological responses	215
2.4.8.	Environmental load	215
2.4.9.	Reaping efficiency on other than paddy	215
2.5.	Results and discussions	215
2.5.1.	Physical characteristics of the workers	215
2.5.2.	Job description	215
2.5.3.	Traditional design of sickle	217
2.5.4.	Occupational hazards with a traditional sickle ergonomic trial.	217
2.5.5.	New ergonomic trial designs of sickles.	220
2.5.5.1.	Blades	220
2.5.5.2.	Handles	225
2.5.5.3.	Protective guard for the sickle	225
2.5.5.4.	Weight of the modified trial design sickles.	225
2.5.6.	Work and productivity study with a traditional sickle.	226

2.5.7.	Work study on modified trial designs of sickles.	226
2.5.8.	Opinion survey by the questionnaire technique.	226
2.5.9.	Physiological responses of the workers while engaged in trial.	228
2.5.10.	Environmental load	228
2.5.11.	Recommended design of sickle.	232
2.5.12.	Benefits by the use of modified ergonomic design of sickles.	232
2.6.	Limitations of this study.	233
2.7.	Conclusions	233
2.8.	Summary	233
3.	<u>A New Ergonomic 'Float Seat' for Improvement of Paddy Cultivation In India.</u>	234-247
3.1.	Introduction	235
3.2.	Review of earlier work	235
3.3.	Aims and Objectives	235
3.4.	Materials and methods	235
3.4.1.	Workers, work and work place	235
3.4.2.	Design of float seat	236
3.4.3.	Productivity and Physiological responses	236
3.4.4.	Questionnaire technique	236
3.5.	Results and discussions	236
3.5.1.	Existing method of work	236
3.5.2.	Physical characteristics and experience of the workers.	238
3.5.3.	Thermal environment	238
3.5.4.	Work and productivity studies.	238
3.5.5.	Questionnaire survey	242
3.5.6.	Physiological cost of trial with new design	244
3.6.	Conclusions	244
3.6.1.	Benefits in the use of float seat	244
3.6.2.	Recommendations for future in depth studies	246
3.7.	Summary	246

4.	<u>A New Ergonomic Leg-cover for Improvement of Paddy Cultivation in India.</u>	248-257
4.1.	Introduction	249
4.2.	Aims and objectives	249
4.3.	Materials and methods	249
4.3.1.	Workers, work and work place	249
4.3.2.	Design of leg-cover	250
4.3.3.	Productivity and physiological responses using the leg-cover.	250
4.3.4.	Questionnaire survey	250
4.4.	Results and discussions	250
4.4.1.	Existing methods of work	250
4.4.2.	Physical characteristics and experiences of the workers.	251
4.4.3.	Thermal environment	251
4.4.4.	Design of leg-cover	251
4.4.5.	Work and productivity study, with and without using leg-covers.	251
4.4.6.	Results on questionnaire	253
4.4.7.	Physiological cost of working with and without using leg-ocover.	253
4.5.	Conclusion	256
4.5.1.	Benefits in the use of leg-cover	256
4.5.2.	Recommendations for future in depth studies	256
4.6.	Summary	256
5.	<u>A New Ergonomic Method for Selection of Workers</u>	258-265
5.1.	Introduction	260
5.2.	Aims and objectives	260
5.3.	Materials and methods	260
5.4.	Results and discussions	261
5.5.	Conclusions	265
5.6.	Summary	265
