LIST OF TABLES

Table 1  The number of juveniles of *Macrobrachiutm malcolmsonii* collected at Jederpalayam bed regulator in the Cauvery river during 1979-1998.

Table 2  Monthly collection of juveniles of *M.malcolmsonii* at Jederpalayam bed regulator in the Cauvery river during 1979-1998.

Table 3  Proximate composition of various raw materials used for the preparation of feed for the assessment of protein requirement of the juveniles of *M.malcolmsonii*.

Table 4  Percentage composition of feeds 1 to 10 used for the assessment of protein requirement of the juveniles of *M.malcolmsonii* of 1.2 + 0.4 cm size.

Table 5  Pellet diameter and stability of feeds 1 to 10.

Table 6  Protein, energy and the ratio between protein and energy of feeds 1 to 10.

Table 7  Protein value of animal and plant sources, protein carbohydrate energy ratio and the protein and non-protein energy ratio of feeds 1 to 10.
Table S  Percentage composition of feeds 11 to 21 used for the optimization of pellet size for *M. malcolmsonii* of different sizes.

Table 9  Pellet diameter, stability and sinking rate of feeds 11 to 21.

Table 10  Pellet diameter and stability of feeds 22 to 25.

Table 11  Percentage composition of feeds 26 to 35 used for identifying the ideal combination of ingredients for maximising the performance of *M. malcolmsonii* for Experiment-1.

Table 12  Proximate composition, energy values and protein energy ratio of feeds 26 to 35 used for Experiment-1.

Table 13  Growth performance of *M. malcolmsonii* fed on feeds 26 to 35 used for identifying ideal combination of various ingredients in Experiment 1 (based on 45-day growth).

Table 14  Percentage composition of the control feed (feed 36) and five experimental feeds (feeds 37 to 41) incorporated with greengram subjected to various treatments for the cultivation of *M. malcolmsonii* of 1.2 ± 0.4 cm size for Experiment-2.

Table 15  Pellet diameter and stability of feeds 36 to 41.
Table 16  Percentage composition of the five experimental feeds (feeds 42 to 46) incorporated with vegetable protein sources subjected to heat treatments for the cultivation of *M. malcohnsonii* of 1.3 ±0.3 cm size for Experiment-3.

Table 17  Pellet diameter and stability of feeds 42 to 46.
LIST OF FIGURES
