Acknowledgements

I would like to express my deepest sense of appreciation and profound gratitude to my revered supervisor Dr. Pradeep Das, Ph.D., Deputy Director, National Institute of Cholera and Enteric Diseases (NICED), Kolkata for his excellent guidance, constant encouragement, valuable suggestions and kindest helps without which I would never have succeeded to complete this study.

I offer my regards to Dr. Sujit K. Bhattacharya, M.D., Director, NICED, Kolkata for encouragement and support in carrying out this work.

I shall remain ever grateful to Prof. James H. McKerrow, Ph.D., M.D., Department of Pathology, University of California, San Francisco (UCSF) for his generosity, tolerance and deep interest in this work. I would like to tender my sincere thanks to him for allowing me to work in his lab to enrich this research work with microarray technique.

I express my sincere gratitude to Prof. Sharon E Reed, M.D., Department of Pathology and Medicine, University of California, San Diego for the generous gift of Entamoeba dispar and Crithidia fasciculata RNA samples, used in this study.

A special debt is owed to Dr. Adam Carroll, Ph.D., Managing Director, UCSF Core Facility for Genomics and Proteomics, for his help in all possible ways to make the microarray work to its completion.

I have been privileged to work in the lab of Dr. Joseph L. DeRisi, Ph.D., Assistant Professor, Department of Biochemistry and Biophysics, UCSF. The warm hospitality of his lab is greatly appreciated.

Throughout my years at NICED, my labmates and colleagues have generously donated or allowed the use of their expertise, reagents, equipment. They include (but are not limited to): Dr. Sanjib Bhattacharya, Late Ms. Debjani Ghosh, Sadhak Sengupta, Partha Mukhopadhyay, Mrs. Sushmita Das, Md. Ali Akbar, Sandipan Ganguly, Paramita Sen,

Contd.
Bernard Rajeev, Dr. Kakali Mitra Dhar, Arindam Mazumder, Abhik Sen, Nilay Nandi, Dr. Srikanta Ghosh, Dimple Khetawat, and Kazi Mirajul Hoque.

It is a pleasure to acknowledge the hearty cooperation of McKerrow lab people, especially Dr. Juan Engel, Dr. Patricia Doyle, Dr. M. Sajid, Rebecca Blank, Dr. Zachary Mackey; the latter provided much thoughtful discussion. Without their support, the microarray task would have been neither pleasant nor possible.

I am thankful to Mr. T. N. Boral and Mr. S. L. P. Singh for their assistance during my laboratory work. I thank all the staff members of NICED for gladly rendering their assistance during this work.

My friend Subrata Bhattacharya’s careful letter-by-letter reading of this manuscript prevented several egregious gaffes from being associated with my name for posterity, as well as provided a refreshing perspective on the content.

To those others who cannot be singled out here, but who have also contributed to the success of this project, my hat is doffed.

Words are indeed inadequate to express my indebtedness to my parents, and all my family members, who inspite of all the inconvenience and trouble caused by me for failing social commitments, inspired me in search of my goal.

The financial assistances of Lady Tata Memorial Trust, Indian Council of Medical Research, UNESCO-American Society for Microbiology, and Sandler Family Foundation, during the entire course of this study are also highly acknowledged.

ANJAN DEBNATH
