STUDIES ON THE TOXAEMIAS OF THE LATER MONTHS OF PREGNANCY

FOREWORD

The thesis "Studies on the Toxaemias of the Later Months of Pregnancy", submitted herewith for the Degree of Doctor of Philosophy of Medicine (D.Phil. Med.) of the University of Calcutta consists mainly in a study of the nature, function, composition and other characteristics of haemoglobin under normal and toxaemic condition of human pregnancy, in course of which it has been observed that the oxygen absorption capacity, ionophoretic pattern and other behaviour of haemoglobin are different in the toxaemia syndrome.

I am extremely grateful to Dr. S.C. Roy for his valuable suggestions and kind help all through this work and to Prof. B.C. Guha for his kind interest in it. I am deeply indebted to Mr. A.K. Saha for his invaluable help during this work, to Dr. N.C. Ganguli, Mr. R. Purakayastha, Mr. S. Ganguly and Mr. D. Nandy for their help during chromatographic and other studies. I am greatly indebted to Dr. S.C. Bose of Eden Hospital, Medical College, Calcutta, Dr. J.B. Chatterjee of the Department of Haematology, School of Tropical Medicine, Calcutta and Superintendent, National Medical College Hospital, Calcutta for their generous co-operation to study the patients in their respective hospitals. I am grateful to Dr. D. K. Roy and
and Mrs. G. Banerjee of the Indian Institute for Medical Research for their kind help in the immunological part of this work. My thanks are due to Prof. B.B. Sarkar, Mr. P.B. Sen and Dr. S. Maitra of the Department of Physiology for giving facilities to work with their Van Slyke, Ionophoretic and Dale's apparatuses. I am extremely indebted to all our patients for their kind co-operation without which this work would not have been possible.

Grateful acknowledgment is also made to the Indian Council of Medical Research for financing this work.
