ACKNOWLEDGEMENT

I am deeply indebted to Prof. Santosh K, Kar and Dr. N. N. Mehrotra who aroused my interest in the field of immunology by giving me an opportunity to work in the field of immunomodulation. When I joined the Ph.D. biotechnology program I had no idea of the field and prospects. Their intellectual support, guidance, novel ideas and suggestions for looking at the problem from various angles have helped me in carrying out the work in this thesis. Prof. Santosh K, Kar is one of the few teachers who give you the freedom to choose the area of research in which you would like to do your Ph.D. He never imposed his ideas on me but encouraged me to keep thinking logically and defend my ideas with simple facts and logic. I also cherish every movement of my association with Dr. N. N. Mehrotra and will also look for his valuable guidance and advice in future.

My sincere thanks to Dr. R. Bhat, Dr. K.J. Mukherjee, Dr U.K. pati, Prof. R. Bhatnagar, Prof. K.B Roy, Dr D.P. Choudhary and all the teachers and other people at the Centre for Biotechnology for making my stay very memorable.

I feel that I shall be failing in my duty if I do not acknowledge the cooperation of my lab mates involved in this study. My special thanks go to Ramanuj and Bimal. Both helped me a lot to work systematically. It is difficult to forget their tips and suggestions while doing experiments. Sanjeev, my batchmate, whom I saw growing and learning in the lab, always shall be remembered as a
quiet and intellectual friend. He is one of the few persons who has wonderful qualities. Other persons who fit into this category are Rajkumar and Biji. Both are very friendly and helpful. The interaction with them was memorable. Their help up to last minute for completion of my thesis would always be remembered. I shall always be depth to them.

I can not forget to thanks my colleagues, Sarat, Subhendhu, Bhabhuti, Bimal, Bijay, Suman, Meenakshi, Himanshu and Vikas, whose presence always reminded me that these shall always be people who would be ready to do anything to help if there was a need. Their association has helped me to grow a lot personally.

I shall never forget to the lab assistants of my lab for providing me clean glassware constantly. For without them I shall never have got the results of my experiments. They were the main building blocks of my thesis. Thank you, Ramsukhji, Mukeshji and Manoj. I also thank Raju for his help in the animal house.

I enjoyed my stay at JNU. Prasanna, Sangeeta, Aruna, Jagdish, Atul, Gaurav, Yogi, Sunil, Shaurabh, Nidhi, Preveen, Aparana, Vibha, Vikas Handa, Neeraj, Shaurabh Singh, Sujeet Singh, Raajkumar, Subhash, Ajher Khan, Moseen, Puneet, Khooshu, Ali, Ruchi, Sarita, Sarik, Smer Singh, Anjaj, Jaikumar, Sunny, Hussain, Neda, Anand, Rajesh, Ashutosh, Shams, Zameer, Ramani and almost every individual has helped in making the work an enjoyable environment. These people in the department have played a major role in this. During the long period of PhD, I came across a large number of M.Sc students. Their association has helped me to realize that one has to always keep pace with developments in science to be able to analyze one's results and observations. My sincere thanks to Dheeraj, Mukesh, Upendra, Naveen, Anajana,
Poonam, Amerdeep, Pramod and Rupa and all those M.Sc. students whose faces I remember but not their names.

A special word of thanks to Naipalji, Sindhu Madam, Yadavji, Anil, Biswajit, Umeshji, and Samrashji, for their help and cooperation. It is well appreciated. Our administrative staff members Shri O.P. Tyagiji, Geeta, Vedpalji were very nice and cooperative to me. My heartfelt thanks to Sainiji who has been very helpful in taking photographs whenever I needed for my work.

I cannot describe the feelings and support of my parents, for whatever I have achieved today is because of them. Without their support and nourishment this research work would not be possible.

Rajvir Singh
