

Contents

1. Introduction

A: Phenomena of glass transition	1
A.1 Brief history of glass	1
A.2 Introduction to liquid glass	3
A.3 Thermodynamics of glass	9
A.4 Structural relaxation	11
A.5 Strong and fragile nature of liquids	12
A.6 Secondary relaxation processes in glassy matrix	14
A.7 Mode coupling theory	14
A.8 The general definition of glass	16
A.9 Plastic crystals and ‘orientational glasses’	17
B: Basic principles of dielectrics	19
B.1 General definition of polarization	19
B.2 Details of molecular mechanism of polarization	20
B.3 Non-polar dielectrics: Clausius Mosotti and Lorentz-Lorentz equation	22
B.4 Polar dielectrics: the Debye equation and Mosotti catastrophe	23
B.5 Polar dielectrics: Onsager’s equation and Kirkwood-Frohlich equation	24
B.6 Dielectrics in a.c. fields	25
B.7 Classical Debye approach: relaxation with a single relaxation time	27
B.8 Deviations from Debye behaviour: distribution of relaxation time approach	28
B.9 Empirical relationships to describe the Complex permittivity	29
B.10 Universal power laws and suggested universalities	31

B.11 The temperature dependence of ϵ' , ϵ'' and f_m	36
C: References	39
2. Experimental methods	46
2.1 Differential scanning calorimetry measurements	47
2.1.1 Description of DSC set-up	50
2.1.2 Calibration OF DSC	51
2.1.3 Procedure for the determination of transition temperatures	52
2.2 Dielectric relaxation measurements	53
2.2.1 Bridge technique	53
2.2.2 D.C. step - response technique	54
2.2.3 Description of dielectric set-up	55
2.2.4 Procedure for the calculation of ϵ' and ϵ''	58
2.3 X-Ray diffraction	60
2.4 References	60
3. Dielectric study of homogeneity in some binary liquids in their super cooled state	63
3.1 Experiment	64
3.2 Results	65
3.2.1 DL-Lactic acid	65
3.2.2 DMSO-Acetic acid.	70
3.2.3 PG-CHOH mixtures	71
3.2.4 4M3HOH-TTP mixtures	72
3.2.5 Mixtures of non-H-bonded liquids.	74
3.3 Discussion	76
3.3.1 dl-lactic acid	76

3.3.2 DMSO-acetic acid	77
3.3.3 PG-CHOH mixtures	81
3.3.4 4M3HOH-TTP mixtures	81
3.3.5 Mixtures of non-H-bonded binary liquids DMSO-acetic acid	82
3.4 Conclusions	83
3.5 References	83
4. Sub-T_g relaxations due to dipolar solutes in nonpolar glas-forming solvents	88
4.1 Experiment	91
4.2 Results	92
4.2.1 Relaxation in pure solvents	92
4.2.2 Relaxation due to dipolar solutes in the solvents.	93
4.2.3 Relaxation of flexible dipolar solutes in various solvents	98
4.3 Discussion	100
4.3.1 Rigid molecular solutes	100
4.3.2 Flexible molecular solutes	102
4.4 Conclusions	110
4.5 References	110
5. Glass transition phenomena in the crystalline phase of hexa-substituted benzenes	116
5.1 Experiment	118
5.2 Results	119
5.3 Discussion	125
5.3.1 Glass transition	125
5.3.2 β - relaxation	128

5.3.3 The spectral dependence of the α -process	131
5.4 Conclusions	135
5.5 References	136
6. Glass transition phenomena in two component plastic crystals:study of hexa-substituted benzenes	141
6.1 Experiment	142
6.2 Results	143
6.3 Discussion	154
6.3.1 Glass transition and α -process	154
6.3.2 Effect of impurities on the α -process	160
6.3.3 The spectral dependence of the α - process	164
6.3.4 T - dependence of f_m and $\Delta\epsilon$ in PCNB-PCB binary system	166
6.3.5 Fragility	167
6.4 Conclusions	168
6.5 References	168
7. Relaxation process in poly(cyclohexyl methacrylate)	173
7.1 Experiment	174
7.2 Results	175
7.3 Discussion	179
7.4 Conclusions	180
7.5 References	180
8. Summary and Conclusions	182
