ACKNOWLEDGEMENTS

I seek this opportunity to thank Prof. G. P. Talwar for providing constant encouragement during the tenure of my doctoral work.

Words fail to express my gratitude to Dr. Sher Ali, who allowed me to work in the exciting field of human genetics under his guidance. He was always there to lend a helping hand, a sympathetic ear whenever the need arose. His nature kept the lab atmosphere just right, inspite of all the tensions prevalent in research.

Heartfelt thanks are also due to all the members of my doctoral committee, especially to Dr. Ramesh Bomezai and Dr. Seyed Hasnain. Dr. Bomezai, inspite of his busy schedule gave his advice freely whenever asked. I am especially indebted to him for his help during the writing of the present work.

My special thanks to Dr. Jamal Ahmad, J. N. Medical College, Aligarh and Dr. Iqbal Parwez, AMU. Without their help it would have been impossible to include the patients data in the thesis.

I don't quite know how to thank Dr. Sunil Khanna, TERI who not only initiated me in research but has provided his unconstrained support and belief in my abilities throughout our acquaintance.

I take this opportunity to thank all the members of Molecular Genetics Lab, Dr. Sahiba, who has been a friend and a colleague both; Khem Singh, whose diligent attitude contributed towards a perfect working atmosphere; Kumar and Mary, interactions with whom both at the scientific and personal level, are a life time treasure. My special thanks to Dr. Sahiba, Mary, Kakoli and Suresh for the help they have given during the writing of the thesis.

This section would be incomplete without a word about the friends whose encouragements have seen me through the countless difficult times in the past five years. Charu, Chandu Bhai, Tanuka, Ashis, Reddi, though no longer at NII these people continued to give their support when I needed it the most. And to all my friends at Jamia and RSH who were there, sometimes just to listen, I would be indebted forever. A special thanks to Vidiya who helped me in bringing the thesis to its present format.

To Babulal for the xeroxing; to Satish for binding and to all the people in the administration who have been invaluable help during the past five years. A special thanks to Mr. Akhilesh Kumar, deputy registrar, for all the help that he has rendered during the past five years.

To mausi, Dr. Rajni Rani, who not only supported me but also helped me out with the cytogenetic analysis of the patient's samples. And to all the other members of my family who proved to be the apt morale boosters at the right time.
